Chang-su Houchins describes the range of silk textiles, lacquerware, ceramics, fans and umbrellas, bamboo and wood products, and swords and arms presented to the United States government, President Franklin Pierce, and Commodore Perry. Japanese government commissioners and officials of the Kingdom of Ryukyu gave more than one hundred gifts before and after the signing of the Treaty of Kanagawa in 1854.

Balanced Urban Development: Options and Strategies for Liveable Cities

Examines how terrorists make technology choices and how the United States can discourage terrorists' use of advanced conventional weapons. Concludes that the United States should urgently start discussions with key producer nations and also decide on an architecture needed to impose technical controls on new mortar systems that should enter development soon.

The book comprises three parts. Part 1 gives a historical description of the development of ironworking techniques since the earliest times. Part 2 is the core of the book and deals with the metallurgical basis of microstructures, with four main themes: phase diagrams, solidification processes, diffusion, and solid state phase transformations. Part 3 begins by an introduction to steel design principles. It then goes on to consider the different categories of steels, placing emphasis on their specific microstructural features. Finally, a comprehensive reference list includes several hundred pertinent articles and books. The book is the work of a single author, thus ensuring uniformity and concision. It is intended for scientists, metallurgical engineers and senior technicians in research and development laboratories, design offices and quality departments, as well as for teachers and students in universities, technical colleges and other higher education establishments.

Micro-Assembly Technologies and Applications

Marcus, a.k.a "w1n5t0n," is only seventeen years old, but he figures he already knows how the system works—and how to work the system. Smart, fast, and wise to the ways of the networked world, he has no trouble outwitting his high school's intrusive but clumsy surveillance systems. But his whole world changes when he and his friends find themselves caught in the aftermath of a major terrorist attack on San Francisco. In the wrong place at the wrong time, Marcus and his crew are apprehended by the Department of Homeland Security and whisked away to a secret prison where they're mercilessly interrogated for days. When the DHS finally releases them, Marcus discovers that his city has become a police state where every citizen is treated like a potential terrorist. He knows that no one will believe his story, which leaves him only one option: to take down the DHS himself. Creating Mr. Kortan

This volume sheds new light upon the role of victims in the aftermath of violence. Victims are central actors in transitional justice, the politics of memory and conflict resolution, yet the analysis of their mobilisation and political influence in these processes has been neglected. After introducing and explaining the reasons for this limited interest, the book's chapters focus on a range of settings and draw on different disciplines to offer insights into the interrelated themes of victimhood – victims, their individual and collective identities, and their role in and impact upon post-conflict societies – and the politics of victimhood – meaning how victimhood is defined, negotiated and contested, both socially and politically. Because it outlines a stimulating research agenda and challenges the view that victims are passive or apolitical, this interdisciplinary volume is a significant contribution to the literature and will be of interest to scholars from disciplines such as law, anthropology, political science, human rights, international studies, and to practitioners.

Adversity Happens to Everyone and It Is Not an Excuse for Abandoning Our Dreams. Journal

Micro-assembly is a key enabling technology for cost effective manufacture of new generations of complex micro products. It is also a critical technology for retaining industrial capabilities in high labour cost areas such as Europe since up to 80% of the production cost in some industries is attributed directly to assembly processes. With the continuous trend for product

miniaturisation, the scientific and technological developments in micro-assembly are expected to have a significant long-term economic, demographic and social impact. A distinctive feature of the process is that surface forces are often dominant over gravity forces, which determines a number of specific technical challenges. Critical areas which are currently being addressed include development of assembly systems with high positional accuracy, micro gripping methods that take into account the adhesive surface forces, high precision micro-feeding techniques and micro-joining processes. Micro-assembly has developed rapidly over the last few years and all the predictions are that it will remain a critical technology for high value products in a number of key sectors such as healthcare, communications, defence and aerospace. The key challenge is to match the significant technological developments with a new generation of micro products that will establish firmly micro-assembly as a core manufacturing process.

Will you comport yourself like a floppy poltroon? Or will you beat the mountain into submission, bending millions of tons of rock and ice to conform to the dictates of your will, like a gentleman? Practice your pelvic thrusts. Forge your spirit in a molten bath of steely resolve. Swing high your axe. Never shed one tear. Keep pulling the trigger, and you too may one day find your destiny of death or glory that awaits every man on top of every mountain. This book will teach you how to be a man, how to slay a mountain, and how to make small things with flippers carry your kit up to the summit where you can carve your initials along with the words: HERE A REAL MAN CHEATED DEATH AND FOUND GLORY!

This book contributes to a better understanding of why historic cities and sacred sites are important, and how cultural roots may influence and improve urban futures. It emphasises the need to include social and cultural dimensions in economic development and offers cases of best practice.

Artifacts of Diplomacy

Spain, China and Japan in Manila, 1571-1644 offers a new perspective on the connected histories of Spain, China, and Japan as they emerged and developed following Manila's foundation as the capital of the Spanish Philippines in 1571. Examining a wealth of multilingual primary sources, Birgit Tremml-Werner shows that cross-cultural encounters not only shaped Manila's

development as a "Eurasian" port city, but also had profound political, economic, and social ramifications for the three pre-modern states. Combining a systematic comparison with a focus on specific actors during this period, this book addresses many long-held misconceptions and offers a more balanced and multi-faceted view of these nations' histories.

Awarded the Nobel Prize for Literature in 1969, Samuel Beckett's influence on 20th century fiction and drama is immeasurable. Published in conjunction with the RT (Radio Telef s ireann) Thomas Davis Lecture Series to mark the centenary of Beckett's birth, Samuel Beckett - 100 Years consists of thirteen essays by many of the foremost academics studying Beckett today. Literary luminaries such as John Banville and Anthony Cronin line up alongside philosophers Dermot Moran and Richard Kearney to delve into the psyche of the man responsible for classics such as Murphy, Krapp's Last Tape, and Waiting for Godot, while actors Barry McGovern and Rosemary Pountney describe what makes his works so theatrical. The book is a challenging and serious look at Beckett's work and its impact on literature today.

This book introduces materials and how advances in materials result in advances in technology and our daily lives. Each chapter covers a particular material, how the material was discovered or invented, when it was first used, how this material has impacted the world, what makes the material important, how it is used today, and future applications. The list of materials covered in this book includes stone, wood, natural fibers, metals, clay, lead, iron, steel, silicon, glass, rubber, composites, polyethylene, rare earth magnet, and alloys.

Death Or Glory!

More than a memoir of a custom cafe racer build this book is a tribute to a teacher who inspired young people to be creative with their minds and capable with their hands. Growing up in Fargo, North Dakota in the 1970s and 80s, The Urban Monk had the opportunity to develop a love for machines, metal working and motorcycles. This book provides a glimpse into what life was like for the author and his young friends in Fargo during that time. It is also a poignant defense of industrial arts education in public schools. After an over three year effort building a custom cafe racer in his spare time and documenting the entire process in videos shared with the world on his YouTube channel Urban Monk TV, the author tells the story of how this project became more than a custom motorcycle build - it became a tribute to his middle school Metal Shop teacher who inspired him to go on to a life time of peaceful meditation in his garage with a wrench in his hand. Anyone interested in motorcycles, mechanics, do-it-yourself projects or a historical retrospective of life in 70s-80s Fargo will enjoy this pleasant read.

Fifty Materials That Make the World

This book explains why AI is unique, what legal and ethical problems it could cause, and how we can address them. It argues that AI is unlike any other previous technology, owing to its ability to take decisions independently and unpredictably. This gives rise to three issues: responsibility--who is liable if AI causes harm; rights--the disputed moral and pragmatic grounds for granting AI legal personality; and the ethics surrounding the decision-making of AI. The book suggests that in order to address these questions we need to develop new institutions and regulations on a cross-industry and international level. Incorporating clear explanations of complex topics, Robot Rules will appeal to a multi-disciplinary audience, from those with an interest in law, politics and philosophy, to computer programming, engineering and neuroscience.

Ten essays discuss federal democracy, the form of government of the United States. The first essay discusses the origins of American federalism. The second examines why we have a federal system, the functions federalism serves, and the consequences of federalism for the American political system. Federalism in the Constitution and constitutional law are treated in the third essay. The importance of cultural pluralism in American life and the role of American federalism in supporting pluralism are the foci of the fourth essay. The roles that the local community, the states, and political parties play in the federal system are examined in essays 5, 6, and 7, respectively. State, local, and professional roles in citizenship education are discussed in the eighth essay. The ninth essay explores how high school U.S. history and government textbooks approach federalism. The concluding essay describes resources on federalism that can be used in curriculum development at the secondary and college levels. Many of the essays are followed by topics for further study and suggested readings for teachers. (RM)

This book provides a unique synthesis of concepts and tools to examine natural resource, socio-economic, legal, policy and institutional issues that are important for managing urban growth into the future. The book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri-urban land, water and energy use challenges. In particular, the book will help the reader to discover underlying principles for the planning of future cities and peri-urban regions in relation to: (i) Balanced urban development

policies and institutions for future cities; (ii) Understanding the effects of land use change, population increase, and water demand on the liveability of cities; (iii) Long-term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead; and (iv) Strategies to adapt the cities and land, water and energy uses for viable and liveable cities. There are growing concerns about water, food security and sustainability with increased urbanisation worldwide. For cities to be liveable and sustainable into the future there is a need to maintain the natural resource base and the ecosystem services in the peri-urban areas surrounding cities. This need is increasing under the looming spectre of global warming and climate change. This book will be of interest to policy makers, urban planners, researchers, post-graduate students in urban planning, environmental and water resources management, and managers in municipal councils.
