Grounded in primary source research, this boldly revisionist book examines the doctrine of salvation in Oneness Pentecostalism (United Pentecostal Church) from its origins through its several developmental stages. The gradual rise of a literal interpretation of Acts 2.38 eliminated a tradition of doctrinal diversity within Oneness thought which regarded salvation as occurring at repentance prior to water and Spirit baptism. With this development a main link to the wider stream of evangelical Christianity was severed. The "water and Spirit" theology resulted in a form of Christianity which does not necessarily require the cross in any meaningful sense for salvation. This study recovers the lost theological tradition associated with important figures such as Howard A. Goss, A.D. Gurley, W.M. Greer, C.H. Taddon, Wynn T. Stairs, Earl Jacques, E.P. Wickens, John Paterson and the Pentecostal Church, Incorporated. Combining traditional historical methodology and theological research with the principles of a broadly based oral history, this study argues for a theological diversity within the history of Oneness Pentecostalism and in so doing bridges an important gap in the history and theology of the United Pentecostal Church.

Raising Dad

When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

Over the past few years a remarkably rapid evolution in the professional level of neonatology and in the survival of immature infants has been witnessed. Persisting ductus arteriosus is common in this population and is associated with impaired longterm outcome. Many uncertainties exist concerning indication, approach, best time, and side effects of necessary measurements and interventions to avoid later neurodevelopmental handicaps of the survivors. Experts in neonatology and pediatric cardiology give their opinion in this book. We are sure it will help to define the level of evidence and to develop standards of intervention for persisting ductus arteriosus in Europe. Adequate dealing with the ductus will become a challenge for every perinatal center.

Despite the loss of the French Empire, France and its former colonies are still bound by a common historical past. With the new global promotion of la Francophonie, the relation between the various constituencies of the French-speaking regions of the world is reexamined and debated in this book, through the conversation between scholars dealing with diverse texts and contexts that present the colonial contact and its imprint. The book illustrates how, in France and in its other worlds, that contact, its repercussions, and its memory are lived and

expressed today in a variety of textual representations. The historical contact between France and its other worlds has given birth to new kinds of cross-cultural expressions in the arts, in literature, and in aesthetics, establishing interrelations and generating appropriations from both sides of the Hexagon frontier, highlighting the fluidity and the permeability of its cultural borders. The book subtext tells that the frontier between France and its other worlds is no more an unshakable geographical, political, and cultural limit, but rather a line that has become mobile, fluctuating, and permeable, and across which currents, ideas, sensitivities, and creativity are expressed, bearing testimony to vitality and diversity but also to a cross-fertilization of cultures and societies (re) crossing or meeting at that line. Seen from this latter perspective, the book comes also as an interrogation of the inclusiveness or exclusiveness of the words francophone and Francophonie, and, at an academic level, a mutual exclusion of French and Francophone Studies.

The Concho Valley, named from the abundant mussel shells found in its principal river by seventeenth-century Spanish explorers, occupies a transitional position between the Chihuahuan Desert to the west and the Balcones Canyonlands to the east. As veteran field biologist and educator Terry C. Maxwell notes, the region has experienced wide-ranging changes in the makeup of its vertebrate populations, especially in the decades since farming and ranching began here in earnest, in the

mid- to late 1800s. In *Wildlife of the Concho Valley*, Maxwell provides the first comprehensive summary of the animal life in this undercovered region of the state, which also happens to be his home territory. Uniquely qualified after a lifetime of study and field work, Maxwell places the region in its biogeographic context and then charts the history of vertebrate investigation there from the seventeenth century to the present. Following this ecological and historical perspective are accounts of all the fishes, amphibians, reptiles, birds, and mammals reliably known by zoologists and naturalists to have occurred in the Concho Valley over the past 150 years. The species accounts include Latin and English names; distribution and abundance status; remarks, where the author elaborates on habitat preference, behavior, and other aspects of natural history; specimens reported; and subspecies and synonyms. This important work of traditional natural history is liberally illustrated with Maxwell's own drawings, photographs, and maps. An invaluable reference, *Wildlife of the Concho Valley* is a major contribution from one of the state's most respected biologists and teachers.

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion

engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.
