Semi Trucks of the 1960s

During the muscle car wars of the 1960s, Holley carburetors emerged as the carbs to have because of their easy-to-tune design, abundance of parts, and wide range of sizes. The legendary Double Pumper, the universal 600-cfm 1850 models, the Dominator, and now the Avenger have stood the test of time and are the leading carburetors in the high-performance engine market. To many enthusiasts, the operation, components, and rebuilding procedures remain a mystery. Yet, many

carburetors need to be rebuilt and properly set up for a particular engine package. Veteran engine building expert and automotive author Mike Mavrigian guides you through each important stage of the rebuilding process, so you have the best operating carburetor for a particular engine and application. In addition, he explains carb identification as well as idle, mid-range and high-speed circuit operation, specialty tools, and available parts. You often need to replace gaskets, worn parts, and jets for the prevailing weather/altitude conditions or a different engine setup. Mavrigian details how to select parts then disassemble, assemble, and calibrate all of the major Holley carburetors. In an easy-to-follow step-by-step format, he shows you each critical stage for cleaning sensitive components and installing parts, including idle screws, idle air jets, primary/secondary main jets, accelerator pumps, emulsion tubes, and float bowls. He also includes the techniques for getting all of the details right so you have a smooth-running engine. Holley carburetor owners need a rebuilding guide for understanding, disassembling, selecting parts, and reassembling their carbs, so the carb then delivers exceptional acceleration, quick response, and superior fuel economy. With *Holley Carburetors: How to Rebuild* you can get the carb set up and performing at its best. And, if desired, you can move to advanced levels of tuning and modifying these carbs. If you're looking for the one complete book that helps you quickly and expertly rebuild your Holley and get back on the road, this book is a vital addition to your performance library.

Fables

Following a deadly car crash, small-town lawyer Lance Cooper risked everything to battle one of the most powerful auto corporations in the world to get justice for a young woman. A fast-paced, journalistic account of tragedy turned to triumph, despair to hope, Cobalt Cover-Up is an inspirational, thoroughly compelling, and victorious read. In the midst of his own family struggles, small-town Georgia lawyer Lance Cooper agreed to defend Ken and Beth Melton and investigate the deadly accident that killed their daughter Brooke after she inexplicably lost control of her Chevy Cobalt. But what started as a heartbreaking yet all too common lawsuit quickly escalated into a David vs. Goliath case when Cooper discovered shocking evidence that General Motors concealed an ignition switch defect for nearly a decade--resulting in 124 deaths, including Brooke's, and risking the lives of millions more. Despite GM's settlement offers and attempts to bury evidence, Cooper refused to back down and worked tirelessly to expose the truth. Locked in a tenacious legal fight, Cooper and the Meltons faced incredible odds--Ken and Beth losing jobs and suffering the difficulty of grieving a beloved daughter during a court battle, Cooper risking his reputation and private practice against the overwhelming opposition from GM's team of lawyers, and both parties facing massive financial strain. Yet, in the relentless pursuit for justice and to protect future innocent lives, this small-town lawyer and a working-class American couple stared down the biggest US auto manufacturing mogul and ultimately transformed the entire industry.

In 2011, 25-year corporate veteran Sandy Van Soye had a dream to travel with a purpose. Out of this vision came the Trekking the Planet expedition. Sandy and her husband Darren left their jobs and traveled 14 months to 53 countries on six continents, bringing the subject of geography to life through stories, pictures, and videos from the road. Following their travels were 55,000 students in 20 countries. Darren and Sandy traveled to such places as the Phongsali province of Laos, the countries of Kyrgyzstan and Uzbekistan, the Tigray region of Ethiopia, and the Amazon Rainforest of Brazil. An integral part of their journey was a goal to complete 500 miles of demanding trekking in 12 of the most remote locations on the planet. More than just about their expedition, Trekking the Planet is the story of Sandy's perseverance in making her dream come true. This was put to the test while trekking in difficult conditions, narrowly missing a plane crash in Nepal, and being bitten by a vampire bat in Brazil. This book not only details these challenges, but how the dream of traveling with a purpose ended up giving back in its own special way, changing her life forever.

Automotive User Interfaces

It is a well acknowledged fact that virtually all of our modern-day components and assemblies rely to some extent on machining operations in their manufacturing process. Thus, there is clearly a substantive machining requirement which will continue to be of prime importance for the foreseeable future. Cutting Tool Technology provides a comprehensive guide to the latest developments in the use of cutting tool technology. The book covers new machining and tooling topics such

as high-speed and hard-part machining, near-dry and dry-machining strategies, multi-functional tooling, 'diamond-like' and 'atomically-modified' coatings, plus many others. Also covered are subjects important from a research perspective, such as micro-machining and artificial intelligence coupled to neural network tool condition monitoring. A practical handbook complete with troubleshooting tables for common problems, Cutting Tool Technology is an invaluable reference for researchers, manufacturers and users of cutting tools.

The Far Away Brothers

Electrostatic accelerators are an important and widespread subgroup within the broad spectrum of modern, large particle acceleration devices. They are specifically designed for applications that require high-quality ion beams in terms of energy stability and emittance at comparatively low energies (a few MeV). Their ability to accelerate virtually any kind of ion over a continuously tunable range of energies makes them a highly versatile tool for investigations in many research fields including, but not limited to, atomic and nuclear spectroscopy, heavy ion reactions, accelerator mass spectroscopy as well as ion-beam analysis and modification. The book is divided into three parts. The first part concisely introduces the field of accelerator technology and techniques that emphasize their major modern applications. The second part treats the electrostatic accelerator per se: its construction and operational principles as well as its maintenance. The third part covers all relevant applications in which electrostatic accelerators are the preferred tool for accelerator-based investigations. Since some topics are common to all types of accelerators, Electrostatic Accelerators will also be of value for those more familiar with other types of accelerators.

Eden of the South

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Manias Panics Crashes

From the days of Alexander Hamilton to the trade wars of Donald Trump, trade policy has been a key instrument of American power and wealth. The open trading system that the United States sponsored after the Second World War serves US interests by promoting cooperation and prosperity, but also allows the allies to become more independent and China to rise. The case studies in Trade and American Leadership examine how the value of preferential trade programs is undercut by the multilateral liberalization that the United States promoted for generations, and how trade sanctions tend either to be too economically costly to impose or too modest to matter. These problems are exacerbated by a domestic political system in which the gains from trade are unevenly distributed, power is fragmented, and strategies are easily undermined. Trade and American Leadership places special emphasis on today's challenges, and the rising danger of economic nationalism.

Cobalt Cover-Up

Flatlined lifts the veil of secrecy on twenty-first century health care and delves into the realities of good people caught in a bad medical system. Dr. Guy L. Clifton, a practitioner as well as a policy advocate, reveals first-hand accounts of needless tragedy, such as the young man who died after a car wreck for lack of a bed in a qualified hospital and the surgeon who was dejected by the scarcity of resources needed to enable him to perform heart surgery on an uninsured man. Arguing that a lack of coordinated care and quality medical practice benchmarks result in high levels of redundancy and ineffectiveness, Clifton proposes that the key to reducing health care costs, improving quality, and financially protecting the uninsured, is to reduce wastefulness, and offers a solution for achieving success. Flatlined sounds the warning call: By 2018 Medicare and Medicaid will consume about one-third of the federal budget. American businesses now pay three times as much of their

payroll for health care as global competitors, expected to worsen as health care grows at twice the rate of the U.S. economy. Based on his years of experience in policy and medicine, Clifton offers an attainable solution through the development of an American Medical Quality System.
