given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition • Discusses different types of costs such as average cost, recurring cost, and life cycle cost. • Deals with different types of cost estimating models, index numbers and capital allowance. • Covers the basics of nondeterministic decision making. • Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation. • Discusses the basic concepts of Accounting. This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

Every day we share encounters with others as we

inhabit the space around us. In offering insights and knowledge on this increasingly important topic, this book introduces a range of empirical and theoretical approaches to the study of shared encounters. It highlights the multifaceted nature of collective experience and provides a deeper understanding of the nature and value of shared encounters in everyday life. Divided into four sections, each section comprises a set of chapters on a different topic and is introduced by a key author in the field who provides an overview of the content. The book itself is introduced by Paul Dourish, who sets the theme of shared encounters in the context of technological and social change over the last fifteen years. The four sections that follow consider the characteristics of shared encounters and describe how they can be supported in different settings: the first section, introduced by Barry Brown, looks at shared experiences. George Roussos, in the second section, presents playful encounters. Malcolm McCulloch introduces the section on spatial settings and – last but not least – Elizabeth Churchill previews the topic of social glue. The individual chapters that accompany each part offer particular perspectives on the main topic and provide detailed insights from the author’s own research background. A valuable reference for anyone designing ubiquitous media, mobile social software and LBS applications, this volume will also be useful to researchers, students and practitioners in fields ranging from computer science to urban studies.

Earth First! Direct Action Manual

In the early 1970s, Chrysler started working on a "magic wagon" -- a completely new passenger van that would fit into a normal garage. It was a daring project for a company that was strapped for cash. This book taps the people who created the minivans, with previously unpublished photos of the original clay models. It is not just a story of a vehicle, but of the people who pushed it through the development

process, brought it to life, and refreshed it in the face of intense competition. Engineers, planners, and designers started arguing over alternatives ten years before the first van left the factory. This book dives into the reasons behind their decisions, and some of the ways minivans could have been very different; it also covers electric and CNG minivans, engines and transmissions, concept cars, and the assembly plants. The paperback is generously illustrated with full-color design studies and photos of the final product; the Kindle version has fewer photos, but still covers the original clay models and the concepts. "It's incredibly rare when the auto industry creates an entirely new class of vehicle, and rarer still when that innovation is an unqualified success story, but such was the case with Chrysler and the development of the minivan. "In Mopar Minivans, Zatz uses the people who were there to retell in vivid detail the largely forgotten story of how this innovative people mover evolved into a quintessential piece of American family life for two generations. It's a story that showcases not only how the automotive industry can work at its best, but also the ways that the industry's prevalent groupthink mentality can stifle innovation." -- Larry Vellequette, Automotive News "I am amazed how complete you are, having not been on-site in the front trenches during agreements, disagreements, and, yes, even skirmishes, at times." -- Chrysler employee David Zatz founded Chrysler-focused web site allpar.com; he also holds a Ph.D. in social and organizational psychology from Columbia University, and has been a business consultant for 20 years.

natural language processing, the field that supports a variety of language technologies, from predictive text and email filtering to automatic summarization and translation. With it, you'll learn how to write Python programs that work with large collections of unstructured text. You'll access richly annotated datasets using a comprehensive range of linguistic data structures, and you'll understand the main algorithms for analyzing the content and structure of written communication. Packed with examples and exercises, *Natural Language Processing with Python* will help you: Extract information from unstructured text, either to guess the topic or identify "named entities" Analyze linguistic structure in text, including parsing and semantic analysis Access popular linguistic databases, including WordNet and treebanks Integrate techniques drawn from fields as diverse as linguistics and artificial intelligence This book will help you gain practical skills in natural language processing using the Python programming language and the Natural Language Toolkit (NLTK) open source library. If you're interested in developing web applications, analyzing multilingual news sources, or documenting endangered languages -- or if you're simply curious to have a programmer's perspective on how human language works -- you'll find *Natural Language Processing with Python* both fascinating and immensely useful.

devices and applications, it is anticipated that wireless traffic will increase exponentially in the coming years. Moreover, future wireless networks all carry a wide variety of flows, such as video streaming, online gaming, and VoIP, which have various quality of service (QoS) requirements. Therefore, a new mechanism that can provide satisfactory performance to the complete variety of all kinds of flows, in a coherent and unified framework, is needed. In this book, we introduce a framework for real-time wireless networks. This consists of a model that jointly addresses several practical concerns for real-time wireless networks, including per-packet delay bounds, throughput requirements, and heterogeneity of wireless channels. We detail how this framework can be employed to address a wide range of problems, including admission control, packet scheduling, and utility maximization.
