Lawrence Lessig, “the most important thinker on intellectual property in the Internet era”, masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can’t do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

Once, human-computer interaction was limited to a privileged few. Today, our contact with computing technology is pervasive, ubiquitous, and global. Work and study is computer mediated, domestic and commercial systems are computerized, healthcare is being reinvented, navigation is interactive, and entertainment is computer generated. As technology has grown more powerful, so the field of human-computer interaction has responded with more sophisticated theories and methodologies. Bringing these developments together, The Wiley Handbook of Human-Computer Interaction explores the many and diverse aspects of human-computer interaction while maintaining an overall perspective regarding the value of human experience over technology.

The Silicon Dragon is a systematic study of the growth of high-tech giants in the Greater China Region, depicting the success story of the microelectronics industry in Taiwan. Literature and studies on Taiwan's success are surprisingly limited, and this book aims to fill this gap, addressing questions such as: How has Taiwan achieved such an outstanding performance in the information industry? How did Taiwan obtain and maintain its competitive advantage? What was the secret of success? What role did the government and manufacturers play during the development process? What insights can newcomers gain from these achievements? The book examines the government policies that acted as catalysts to the growth of high-tech industries in Taiwan, along with the roles of high-tech incubators and government-administered science parks. The authors provide case studies of high profile companies including Acer, Philips Semiconductors and Macronix International, and interviews with key decision makers to highlight the corporate strategies adopted in response to government policies and global commercial demand. Finally, insightful narratives on the birth and growth of a government-fostered strategic industry are provided, as is a synopsis of the Asian contribution to the evolution of the global

microelectronics development. This book will strongly appeal to academics, researchers and students with an interest in engineering, technology and business management. Business managers and government officials will also find much to interest them in this book.
