The result of a conference jointly sponsored by the Asia Program of the Wilson Center and the MIT-Japan Science and Technology Program, these papers suggest that America must better understand its

major high-tech competitor, Japan, if it wishes to balance our bilateral relationship. The challenge of overcoming America's technical illiteracy about Japanese science and technology requires awareness of the importance of training scientists and engineers in the Japanese language, increased funding for applied Japanese language studies, and a commitment by U.S. corporations to employ Americans that acquire foreign language and area expertise. Co-published with the Woodrow Wilson International Center for Scholars.

Plato was the first and most formidable thinker to recognise that education is a fiercely contested concept, and to point out what great social and personal issues are at stake in education. He articulated a compelling argument for a liberal arts education as something peculiarly befitting free and autonomous beings. He understood the centrality of education for human well-being and flourishing. And he was the first to set forth a systematic theory of education. In this text, Robin Barrow concisely and convincingly establishes the continuing relevance of Plato's views to debates on such issues as nature vs. nurture (or genetic inheritance vs. social background),

philosophy vs. sophistry (or the pursuit of true understanding vs. the pursuit of reputation, or perhaps simply truth vs. politics and the media). Questions concerning the fair distribution of education, moral education, value judgments and human nature are explored along with themes more specifically associated with Plato's philosophy such as the Theory of Ideas. The whole is embedded in a clearly presented account of the historical background to Plato's thought.

Philosophy of Education: The Key Concepts

The allure of educational technology is easy to understand. Classroom instruction is an expensive and time-consuming process fraught with contradictory theories and frustratingly uneven results. Educators, inspired by machines' contributions to modern life, have been using technology to facilitate teaching for centuries. In *Teaching Machines*, Bill Ferster examines past attempts to automate instruction from the earliest use of the postal service for distance education to the current maelstrom surrounding Massive Open Online Courses. He tells the stories of the entrepreneurs and

visionaries who, beginning in the colonial era, developed and promoted various instructional technologies. Ferster touches on a wide range of attempts to enhance the classroom experience with machines, from hornbooks, the Chautauqua movement, and correspondence courses to B. F. Skinner's teaching machine, intelligent tutoring systems, and eLearning. The famed progressive teachers, researchers, and administrators that the book highlights often overcame substantial hurdles to implement their ideas, but not all of them succeeded in improving the quality of education. *Teaching Machines* provides invaluable new insight into our current debate over the efficacy of educational technology.

"Recollecting Plato's *Meno* examines both the dialogue itself and the response to it of Plato's successors, from Aristotle and spurious Platonic dialogues, through Cicero and an anonymous commentator on the *Theaetetus*, to the Neoplatonists. In the light of that response, which often suggests a

detailed reading of the text in its entirety, Harold Tarrant develops a fresh and more integrated view of the original dialogue."--Jacket.

What should be the role of our institutions of higher education? To promote good moral character? To bring an end to racism, sexism, economic oppression, and other social ills? To foster diversity and democracy and produce responsible citizens? In *Save the World On Your Own Time*, Stanley Fish argues that, however laudable these goals might be, there is but one proper role for the academe in society: to advance bodies of knowledge and to equip students for doing the same. When teachers offer themselves as moralists, political activists, or agents of social change rather than as credentialed experts in a particular subject and the methods used to analyze it, they abdicate their true purpose. And yet professors now routinely bring their political views into the classroom and seek to influence the political views of

their students. Those who do this will often invoke academic freedom, but Fish suggests that academic freedom, correctly understood, is the freedom to do the academic job, not the freedom to do any job that the professor so chooses. Fish insists that a professor's only obligation is "to present the material in the syllabus and introduce students to state-of-the-art methods of analysis. Not to practice politics, but to study it; not to proselytize for or against religious doctrines, but to describe them; not to affirm or condemn Intelligent Design, but to explain what it is and analyze its appeal." Given that hot-button issues such as Holocaust denial, free speech, and the Israeli-Palestinian conflict are regularly debated in classrooms across the nation, *Save the World On Your Own Time* is certain to spark fresh debate--and to incense both liberals and conservatives alike--about the true purpose of higher education in America.

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work Republic (514a–520a) to compare "the effect of education (παιδεία) and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b–509c) and the analogy of the divided line (509d–511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d–534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in

front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

Sponsored by the Department of Classics of Harvard University, a revised edition of the late Professor Smyth's *A Greek Grammar for Colleges* is now available. All necessary corrections have been made, and the book retains the form which has long made it the most complete and valuable work of its kind. In this descriptive grammar the author offers a treatment of Greek syntax which is exceptionally rich as well subtle and varied.

Teaching Machines

At a time when Steve Jobs was only a teenager and Mark Zuckerberg wasn't even born, a group of visionary engineers and designers--some of them only high school students--in the late 1960s and 1970s created a computer system called PLATO, which was light-years ahead in experimenting with how people would learn, engage, communicate, and play through connected computers. Not only did PLATO engineers make significant hardware breakthroughs with plasma displays and touch screens but PLATO programmers also came up with a long list of software innovations: chat rooms, instant messaging, message boards, screen savers, multiplayer games, online newspapers, interactive fiction, and emoticons. Together, the PLATO community pioneered what we now collectively engage in as cyberculture. They were among the first to identify and also realize the potential and scope of the social interconnectivity of computers, well before the creation of the internet. PLATO was the foundational model for every online community that was to follow in its footsteps. The Friendly Orange Glow is the first history to recount in fascinating detail the remarkable accomplishments

and inspiring personal stories of the PLATO community. The addictive nature of PLATO both ruined many a college career and launched pathbreaking multimillion-dollar software products. Its development, impact, and eventual disappearance provides an instructive case study of technological innovation and disruption, project management, and missed opportunities. Above all, The Friendly Orange Glow at last reveals new perspectives on the origins of social computing and our internet-infatuated world.

Adult learners of ancient Greek are often attracted to it by the prospect of being able to read in the original a particular author or genre. Greek philosophical writing and Plato in particular is often the target. This book's material has been tried and tested by the author over the years with adult classes, and can be used as a course textbook, or as a handbook for self-teaching. Each of 25 sections is clearly laid out - with tabulation of Greek word-forms and grammar. Each includes ample exercises and practice in reading Greek sentences. Readings in later sections consist of passages of continuous Greek from Plato's Meno, a typical Platonic dramatic dialogue.
