Essentials of Introductory Chemistry

Basic Chemistry

A full-year course taken primarily by chemistry majors, other science majors (especially biology and pre-health), and engineering students. First introduced in 1995, McMurry/Fay's Chemistry is now recognized as one of the leading books in science education. The second edition refines the qualities that led to the text's success in the first place. "The text is a beautifully presented and well written general chemistry text. The chapter on gas laws, where the combination of narrative and illustrations leads the students to almost derive the Kinetic-Molecular theory on their own." (Mildred Hall, Clark State Community College.)

CK-12 Chemistry - Second Edition

Chemistry for the Health Sciences

Basic Chemical Principles

This bestseller emphasizes the practical aspects of general, organic, and biological chemistry with numerous applications to and case histories of clinical nursing and health-related situations. Avoiding excessive math and theory, it offers thorough and uniquely diverse coverage, giving allied health professionals the chemical background necessary to understand the various medical tests and procedures they will be following and performing in their jobs. Stresses the relationship between inorganic chemistry and the life processes with discussions of acids and bases, oxidation-reduction, nuclear chemistry and radio-activity, and more. Explains the various chemical processes taking place in the body during normal and abnormal metabolism, and considers the effects of an excess or deficiency of vitamins and hormones. Offers the state-of-the-art research in genetics, radiation technology, and electron microscopy. Supports material with a generous amount of practical examples—including case histories—and includes quality illustrations and many full-color photographs. For allied health professionals.

Partial Solutions Manual

"Introductory Chemistry," Third Edition helps readers master the quantitative skills and conceptual understanding they need to gain a deep understanding of chemistry. Unlike other books on the market that emphasize rote memory of problem-solving algorithms, "Introductory Chemistry" takes a conceptual approach with the idea that focusing on the concepts behind chemical equations helps readers become more proficient problem solvers. What Is Chemistry?, The Numerical Side of Chemistry, The Evolution of Atomic Theory, The Modern Model of the Atom 1, Chemical Bonding and Nomenclature, The Shape of Molecules, Chemical Reactions, Stoichiometry and the Mole, The Transfer of Electrons from One Atom to Another in a Chemical Reaction Intermolecular Forces and the Phases of Matter, What If There Were No Intermolecular Forces?, The Ideal Gas Solutions, When Reactants Turn into Products, Chemical Equilibrium, Electrolytes, Acids, and Bases. For all readers interested in introductory chemistry.

The CliffsStudySolver workbooks combine 20 percent review material with 80 percent practice problems (and the answers!) to help make your lessons stick. CliffsStudySolver Chemistry is for students who want to reinforce their knowledge with a learn-by-doing approach. Inside, you'll get the practice you need to learn Chemistry with problem-solving tools such as Clear, concise reviews of every topic Practice problems in every chapter — with explanations and solutions A diagnostic pretest to assess your current skills A full-length exam that adapts to your skill level A glossary, examples of calculations and equations, and situational tasks can help you practice and understand chemistry. This workbook also covers measurement, chemical reactions and equations, and matter — elements, compounds, and mixtures. Explore other aspects of the language including Formulas and ionic compounds Gases and the gas laws Atoms The mole — elements and compounds Solutions and solution concentrations Chemical bonding Acids, bases, and buffers Practice makes perfect — and whether you're taking lessons or teaching yourself, CliffsStudySolver guides can help you make the grade.

Fundamentals of Environmental Chemistry, Third Edition

Chemistry

The text's three main goals are to introduce chemistry as a living, relevant science, to encourage learning and critical thinking, and to help readers overcome the math difficulties that impede their progress in chemistry. Designed to help readers master the principles of general chemistry. As a prep book, it promotes active involvement with the material. There are special features throughout that reinforce concepts and help to develop strong problem solving and study skills. Updated to Include an Interactive Learning Ware problems CD containing several of the chapter ending problems from the book in an interactive tutorial with feedback to help readers set up and solve problems.

Survival Guide to General Chemistry

Bishop's text shows students how to break the material of preparatory chemistry down and master it. The system of

objectives tells the students exactly what they must learn in each chapter and where to find it.

Prentice Hall Physical Science Concepts in Action Program Planner National Chemistry Physics Earth Science

Learning the fundamentals of chemistry can be a difficult task to undertake for health professionals. For over 35 years, Foundations of College Chemistry, Alternate 14th Edition has helped readers master the chemistry skills they need to succeed. It provides them with clear and logical explanations of chemical concepts and problem solving. They'll learn how to apply concepts with the help of worked out examples. In addition, Chemistry in Action features and conceptual questions checks brings together the understanding of chemistry and relates chemistry to things health professionals experience on a regular basis.

Study Guide With Answers to Selected Problems

Distinguished by its superior allied health focus and integration of technology, Seager and Slabaugh's CHEMISTRY FOR TODAY: GENERAL, ORGANIC, and BIOCHEMISTRY, Fifth Edition continues to lead the market on both fronts through numerous allied health-related applications, examples, boxes, and a new Companion Web Site, GOB ChemistryNow(tm). In addition to the many resources found in GOB ChemistryNow, this powerful new Web site contains questions modeled after the "Nursing School and Allied Health Entrance Exams" and NCLEX-LPN "Certification Exams." The authors strive to dispel users' inherent fear of chemistry and to instill an appreciation for the role chemistry plays in our daily lives through a rich pedagogical structure and an accessible writing style that provides lucid explanations. In addition, Seager and Slabaugh's CHEMISTRY FOR TODAY, Fifth Edition, provides greater support in both problem-solving and critical-thinking skills. By demonstrating how this information will be important to a reader's future career and providing important career information online, the authors not only help readers to set goals but also to focus on achieving them.

Chemistry: The Study of Matter

Contains a review of important concepts, detailed solutions to exercises answered in the text, and self-test questions for each chapter.

Chemistry

Chemical Principles Study Guide

For one-semester courses in Basic Chemistry, Introduction to Chemistry, and Preparatory Chemistry, and the first term of Allied Health Chemistry. This text is carefully crafted to help students learn chemical skills and concepts more effectively. Corwin covers math and problem-solving early in the text; he builds student confidence and skills through innovative problem-solving pedagogy and technology formulated to meet student needs.

General, Organic, and Biological Chemistry

This text expands its scope to explore the emerging area that is described as sustainability science and technology, which includes green chemistry and industrial ecology. It is designed for those who have little or no knowledge of chemistry, but who need the basics of chemical science for their course of study or profession.

Addison-Wesley small-scale chemistry

This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific, detailed step-by-step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step-by-step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid/base reactions which often persists through working with acid/base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshman in STEM fields.

Basic Concepts of Chemistry

Chemistry with Inorganic Qualitative Analysis is a textbook that describes the application of the principles of equilibrium represented in qualitative analysis and the properties of ions arising from the reactions of the analysis. This book reviews the chemistry of inorganic substances as the science of matter, the units of measure used, atoms, atomic structure, thermochemistry, nuclear chemistry, molecules, and ions in action. This text also describes the chemical bonds, the representative elements, the changes of state, water and the hydrosphere (which also covers water pollution and water purification). Water purification occurs in nature through the usual water cycle and by the action of microorganisms. The air flushes dissolved gases and volatile pollutants; when water seeps through the soil, it filters solids as they settle in the bottom of placid lakes. Microorganisms break down large organic molecules containing mostly carbon, hydrogen, nitrogen, oxygen, sulfur, or phosphorus into harmless molecules and ions. This text notes that natural purification occurs if the level of contaminants is not so excessive. This textbook is suitable for both chemistry teachers and students.

Chemistry with Inorganic Qualitative Analysis

Prentice Hall Physical Science: Concepts in Action helps students make the important connection between the science they read and what they experience every day. Relevant content, lively explorations, and a wealth of hands-on activities take students' understanding of science beyond the page and into the world around them. Now includes even more technology, tools and activities to support differentiated instruction!

Chemistry for Today General Organic A

Designed for students in Nebo School District, this text covers the Utah State Core Curriculum for chemistry with few additional topics.

Chemistry for Today

Offers accurate, lucid and interesting explanations of basic concepts and facts of chemistry while helping students develop skills in analytical thinking and problem solving. Students are taught, in a variety of ways, to think of skills as tools that can be used to solve complex problems. Several aids are included to help focus and inspire student interest--frequent reference to common chemicals in commercial products, numerous photographs of reactions, in-chapter practice exercises following worked examples.

CK-12 Foundation's Chemistry - Second Edition FlexBook covers the following chapters: Introduction to Chemistry - scientific method, history. Measurement in Chemistry - measurements, formulas. Matter and Energy - matter, energy. The Atomic Theory - atom models, atomic structure, sub-atomic particles. The Bohr Model of the Atom electromagnetic radiation, atomic spectra. The Quantum Mechanical Model of the Atom energy/standing waves, Heisenberg, Schrodinger. The Electron Configuration of Atoms Aufbau principle, electron configurations. Electron Configuration and the Periodic Table- electron configuration, position on periodic table. Chemical Periodicity atomic size, ionization energy, electron affinity. Ionic Bonds and Formulas ionization, ionic bonding, ionic compounds. Covalent Bonds and Formulas nomenclature, electronic/molecular geometries, octet rule, polar molecules. The Mole Concept formula stoichiometry. Chemical Reactions balancing equations, reaction types. Stoichiometry limiting reactant equations, yields, heat of reaction. The Behavior of Gases molecular structure/properties, combined gas law/universal gas law. Condensed Phases: Solids and Liquids intermolecular forces of attraction, phase change, phase diagrams. Solutions and Their Behavior concentration, solubility, colligate properties, dissociation, ions in solution. Chemical Kinetics reaction rates, factors that affect rates. Chemical Equilibrium forward/reverse reaction rates, equilibrium constant, Le Chatelier's principle, solubility product constant. Acids-Bases strong/weak acids and bases, hydrolysis of salts, pH Neutralization dissociation of water, acid-base indicators, acid-base titration, buffers. Thermochemistry bond breaking/formation, heat of reaction/formation, Hess' law, entropy, Gibb's free energy. Electrochemistry oxidation-reduction, electrochemical cells. Nuclear Chemistry radioactivity, nuclear equations, nuclear energy. Organic Chemistry straight chain/aromatic hydrocarbons, functional groups. Chemistry Glossary
