A Splinter of the Cross

Shakespeare's Culture in Modern Performance is an original study at the interface of a historicizing literary criticism and the study of modern performance. In a critical climate that views the cultural object of performance as authentic in itself, is there any point in exploring a script's original history? The writer argues for a dialogic understanding of Shakespeare's plays in performance relative to unresolved issues of modernity, in a study of modern productions on stage and screen.

The Man Without a Country and Other Tales

A Vision of the Future

Tom Brady and the New England Patriots

This book is a non-fiction account of a family caught in a cult for + 25 years. The book describes the deception and manipulation that changes the person's life forever. As a young couple we entered into what we thought was a Christian church only to find out there were rules and stipulations that spiraled down into cultish practises. Our three children have been held captive for ten years. One

child and her family, husband and three children have escaped but we still have two children and seven grandchildren, we have never met, imprisoned there. In a cult up becomes down and light becomes dark. God becomes man and the followers have no choice but to hear and obey what that man says. Direction as far as education, livelihood, hopes, dreams, spouses even wardrobe are no longer your decision. The "man" chooses for you and you obey or enter "outer darkness" when you leave this world.

Paul Wang's JAVA WITH OBJECT-ORIENTED PROGRAMMING eases students into an understanding of the object-oriented paradigm from the very first page, just as he does in JAVA WITH OBJECT-ORIENTED PROGRAMMING WITH WORLDWIDE WEB APPLICATIONS, on which this new book is modeled. After the early chapters that present classes and Java features and constructs, Wang introduces new object-oriented concepts throughout the book, while clearly showing how Java addresses these issues. He also goes the extra step of including case studies to illustrate how Java and object-oriented programming are applied. Early in the book, Wang introduces students to a case study involving a pocket calculator. This case study is revisited throughout the book as students learn new aspects of object-oriented programming and the Java language. The book then concludes with a chapter on some of the processes associated with object-oriented design. As a result, students

are able to fully grasp the concepts they learn.

Clinicians have long been fascinated by the rare and exotic in medicine. Similarly, psychiatrists and mental health professionals have been intrigued by the uncommon and extraordinary syndromes which, despite their rarity, have much to teach us about the limitless forms of human adaptation. Of particular interest is the fact that fragments and partial expressions of these rare disorders are often encountered in the dreams and fantasies of the "ordinary" patient. For this reason, the understanding and insights collected in this volume are likely to have clinical usefulness far beyond those rare occasions when we encounter the exotic in its fully developed form. These disorders demonstrate the complex interplay between intra psychic dynamic forces and the cultural influences which act to shape overt symptomatology. The section on extraordinary syndromes from non-Western cultures demonstrates the universality of the psychodynamic roots of human suffering, despite the seemingly strange forms in which this suffering is expressed. As clinicians we are too often restricted by ethnocentric attitudes and culturally determined stereotypes. This volume provides a stimulating and enjoyable opportunity to reach beyond those limitations.

A stand-alone working document, Stormwater Effects Handbook: A Toolbox for Watershed Managers, Scientists, and Engineers assists scientists and regulators in determining when stormwater runoff causes adverse effects in receiving waters. This complicated task requires an integrated assessment approach that focuses on sampling before, during, and after storms. The Handbook supplies assessment strategies, sample testing and collection methods, and includes illustrative figures and tables. The authors introduce an innovative design that can be tailored to address a wide range of environmental concerns, such as: ecological and human health risk assessments, water quality or biological criteria exceedences, use impairment, source identification, trend analysis, determination of best

management practices, stormwater quality monitoring for NPDES Phase I and II permits and applications, and total maximum daily load assessments. They provide case studies to illustrate the effectiveness of this approach and the data that can be compiled. Containing reviews of emerging technologies that hold promise for more effective receiving water evaluations, this book gives you detailed information on selecting methods and carrying out comprehensive evaluations. It includes guidance for the experimental design measurements, as well as standard and advanced statistical methods for data evaluations. Despite the complexity of stormwater management, successful and accurate assessments of their impact are possible by following the integrated approaches described in Stormwater Effects Handbook: A Toolbox for Watershed Managers, Scientists, and Engineers.

Told in diary form by an irresistible heroine, this “heartfelt, bittersweet, and ever-so-clever coming-of-age fantasy” (School Library Journal, starred review) named one of Publishers Weekly’s Best Books of the Year from the New York Times bestselling author of the May Bird trilogy sparkles with science, myth, magic, and the strange beauty of the everyday marvels we sometimes forget to notice. Spirited, restless Gracie Lockwood has lived in Cliffden, Maine, her whole life. She’s a typical girl in an atypical world: one where sasquatches helped to win the Civil

War, where dragons glide over Route 1 on their way south for the winter (sometimes burning down a T.J. Maxx or an Applebee's along the way), where giants hide in caves near LA and mermaids hunt along the beaches, and where Dark Clouds come for people when they die. To Gracie it's all pretty ho-hum...until a Cloud comes looking for her little brother Sam, turning her small-town life upside down. Determined to protect Sam against all odds, her parents pack the family into a used Winnebago and set out on an epic search for a safe place that most people say doesn't exist: The Extraordinary World. It's rumored to lie at the ends of the earth, and no one has ever made it there and lived to tell the tale. To reach it, the Lockwoods will have to learn to believe in each other—and to trust that the world holds more possibilities than they've ever imagined.

Midwest and Its Children

Conceived in the early 1970s to study the phenomenology, diagnosis, genetics, and clinical course of depression, the NIMH Collaborative Depression Study (CDS) has influenced research and practice since its inception. *Clinical Guide to Depression and Bipolar Disorder: Findings From the Collaborative Depression Study* summarizes key findings from the study and the related literature to provide comprehensive and up-to-date knowledge on the course and outcome of illness in mood disorders. Nowhere else can clinicians find such detailed longitudinal data, combined with astute clinical analysis of the current research. The volume offers: Historical background on how psychodynamic psychiatry was overtaken by psychobiological perspectives, and the challenges and controversies that gave rise to the CDS, providing the context necessary to understand the profession's development to the present day. A wealth of information on nosology, natural history, phenomenology, and treatment response in depressive and bipolar disorders. Detailed descriptions of the study methods employed, providing information and insights that will assist researchers in the longitudinal design of prospective cohort studies. Comprehensive review of outcomes in mood disorder, including delineation of the long-term course of bipolar I, bipolar II, and unipolar major depressive disorders, the implications of which will continue to be instrumental in the development of psychiatric nosology and indispensable to clinicians engaged in assessment and treatment. Critical information clinicians need in order to read the clinical signs in their patients and predict the "switch" from unipolar to bipolar disorder. A fascinating review of the evolution of diagnostic

thinking about the role of anxiety in mood disorders, and the contributions of the CDS to the newly published DSM-5®. Each chapter is accompanied by a time-saving summary, as well as a section on clinical implications that translates the findings into practical points and key recommendations clinicians need to know to provide optimal care. Psychiatrists, clinical psychologists, residents, and fellows will turn to *Clinical Guide to Depression and Bipolar Disorder: Findings From the Collaborative Depression Study* to better understand the course and outcome of their patients' mood disorders and, ultimately, to improve their clinical skills.

Building the Getty

Excerpt from *Light Come, Light Go*: The passion for speculation which, throughout all ages, has captivated the great bulk of humanity, would seem to be an innate characteristic of mankind. It assumes various forms and guises which often deceive those over whom it exercises its sway, and becomes in numberless cases a veritable obsession, causing its victims to devote the whole of their time, thoughts, and money—sometimes even their lives—to its service. Devotees of the simpler forms of gambling, such as are to be procured at the card-table and on the race-course, are often looked down upon by people who are themselves under the sway of other insidious, if more reputable, modes of tempting fortune. For all speculation, whether it be in pigs or wheat, stocks and shares, race-horses or cards, is in essence the same—its main feature being merely the desire to obtain “something for nothing,” or in other words to acquire wealth without work. Gambling, of no matter what kind, is thus a conscious and deliberate departure from the general aim of civilised society, which is to obtain proper value for its money. The gambler, on the other hand, receives either a great deal more than he gives or nothing at all.

My Diary from the Edge of the World

In recent years, planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm wet climate, and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan, creating rivers, lakes, and geologic landscapes with uncanny resemblances to Earth's. Vision and Voyages for Planetary Science in the Decade 2013-2022 surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean, and the Uranus Orbiter and Probe mission to investigate that planet's interior structure,

atmosphere, and composition. For medium-size missions, Vision and Voyages for Planetary Science in the Decade 2013-2022 recommends that NASA select two new missions to be included in its New Frontiers program, which explores the solar system with frequent, mid-size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects, it should focus on smaller, less expensive missions first. Vision and Voyages for Planetary Science in the Decade 2013-2022 suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It also recommends that the program enlist the participation of international partners. This report is a vital resource for government agencies supporting space science, the planetary science community, and the public.

The refusal of a Muslim basketball player to stand for the US national anthem in 1996, and the ensuing Islamophobic outcry, sparked Abou El Fadl (law, U. of California-Los Angeles) to write his historical and philosophical treatise, published in 1997 and subsequently in both English and Arabic. It has generated little attention but much controversy, especially among Muslims. It is enlarged here. c. Book News Inc.
