Most hardware and software companies experience cycles of success and failure, that pattern is certainly not a compelling publishing topic. When you add in the name of Apple Computer, the picture changes from ho-hum to humdinger though. Right now, Apple's shares have surged to a 4-year high, and along with the runaway success of Apple's iPod (10 million iPods sold as of Dec 2004, and 2 million+ units sold in the last 3 months alone), Apple stock seems poised to only increase in value. There's a "halo" effect beginning to take hold - simple put, consumers and business people alike are so impressed with iPod's technology and success that they're taking a second look at other Apple products and in particular Macintosh computers. If the current trends continue, Apple will have sparked yet another revolution in the personal computer arena, and will regain ground many thought was lost for good. The Apple Way shows how this company's steps and missteps have molded and shaped them, and what lessons the world at large can learn from Apple. Apple has emerged as a Wall Street phenomenon with its stock increasing in value some 250% in the past year Uses the proven pedagogy of the existing Way books to provide bite-sized business success maxims and Apple's underlying guiding principles Includes lessons learned the hard way by revealing the company's strengths and obstacles Cruikshank has played a role in developing the following M-H books: Pink Cadillac, Leadership Secrets of Colin Powell, What It Takes to Be Number One, The Essential Vince Lombardi, Get Better or Get Beaten (condensed edition), plus many others

Close-up and macro photography is one of the most popular types of photography among digital photographers today. After the big-range zoom, a macro lens is typically one of the next purchases considered by serious outdoor photographers and amateur photographers looking for close-up capability in all zoom lenses. Yet hobbyist photographers struggle. Many macro shots just don't make it—not sharp, confusing backgrounds, muddled compositions, misplaced sharpness, and distracting light. Even more advanced photographers find challenges working with depth of field, dealing with light, and using different focal lengths up close. You need a book that goes beyond the camera manuals to teach you how to select and use various lenses to take great macro shots. This guide by pro photographer Rob Sheppard will help you conquer the fundamentals and capture stunning pictures. Sheppard starts with the basics. He discusses factors such as depth of field, perspective, and compression and which types of lenses are right for your style of shooting. You will have a better understanding of your equipment and understand your choices for investing in lenses. Beautifully illustrated with large, compelling photos, this book teaches you how to take control of your photography to get the image you want every time you pick up the camera.

In the not-so-distant past, color reproduction was considered a craft--one handled by skilled craftspeople using proprietary systems. Today--thanks to the proliferation of desktop systems and devices--everyone and their uncle can get their hands in. But the bottom line is this: It's still a craft--and to apply color consistently and correctly across various hardware, software, and output devices, you need this hands-on project based guide. As the only Apple-certified tutorial on the topic, this book cuts through the theory to go straight to the heart of the matter: How to set up a Mac OS X-based workflow for those situations in which you employ color: photography and image capture, page layout and content creation, and output (to desktop printer or press). Author and color expert Joshua Weisberg distills a complicated process to its step-by-step essentials through a series of lessons and exercises that you can follow while using the files on the companion DVD.
