In what ways do films influence and interact with society? What social forces determine the kinds of movies that get made? How do movies reinforce—and sometimes overturn—social norms? As societies evolve, do the films that were once considered 'great' slip into obscurity? Which ones? Why? These questions, and many others like them, represent the mainstream of scholarly film studies today. In Engaging Cinema, Bill Nichols offers the first book for introductory film students that tackles these topics head-on. Published in a handy 'trade paperback' format, Engaging Cinema is inexpensive and utterly unique in the field—a perfect complement to or replacement for standard film texts.

How to select a boat, plan your project, finish the job, and actually head for the water. Over the past thirty to forty years boat builders, large and small, have produced tens of thousands of fiberglass boats. Many now sit abandoned, waiting for some tender care to get back on the water where they belong. Fiberglass unlike many other types of boatbuilding materials does not rot, rust, or break down over the years. Many people have realized this, of course, and have started what they think will be an easy project. They were wrong, and many well-intentioned renovations sit abandoned. Whatever the reason

for wanting to take on the restoration of a project boat, proper planning and organization can make the difference between success and failure. Fiberglass Boat Restoration is about how to plan, organize and successfully complete a project boat restoration. It will explain why it is important to put your efforts and resources into some areas and not others. It contains valuable information about what to look for when considering the purchase of a project boat. Although the focus of the book is fiberglass, the information will be useful to anyone undertaking the building or restoration of any boat.

"This work is significant. It is the first to include a method of assessing structural strength in the context of the modern marine environment." --Commander M. C. Cruder, U.S. Coast Guard Acclaimed author and naval architect Dave Gerr created this unique system of easy-to-use scantling rules and rules-of-thumb for calculating the necessary dimensions, or scantlings, of hulls, decks, and other boat parts, whether built of fiberglass, wood, wood-epoxy composite, steel, or aluminum. In addition to the rules themselves, The Elements of Boat Strength offers their context: an in-depth, plain-English discussion of boatbuilding materials, methods, and practices that will guide you through all aspects of boat construction. Now you can avoid wading through dense technical engineering manuals or tackling advanced mathematics. The Elements of Boat Strength has all the formulas, tables, illustrations, and charts you need to judge how heavy each piece of your boat should be in order to last and be safe. With this book, an inexpensive scientific calculator, and a pad of paper, you'll be able to design and specify all the components necessary to build a sound, long-lasting, rugged vessel. What reviewers have said about Dave Gerr's books: Propeller Handbook "By far the best book available on the subject."--Sailing "The best layman's guide we've ever read."--Practical Sailor Dave Gerr and International Marine made a complicated topic understandable and put it into a handbook that is easy to use."--WoodenBoat "Without doubt the definitive reference for selecting, installing, and understanding boat propellers."--Royal Navy Sailing Association Journal The Nature of Boats "If you are not nautically obsessed before reading this book, you will most certainly be afterward."--Sailing Fascinating potpourri of information about today's boats, modern and traditional."--WoodenBoat
