This book will help you learn the basics of CSS. You will see lots of code examples and their results and you will be able to create your own codes for designing your very own website. \*I'll cover a short introduction of what CSS is. You will learn about the CSS syntax and the option of adding comments to each CSS code for easy reading and remembering. \*I'll teach you about CSS selectors and the insertion of CSS style sheets into HTML elements. You will be able to learn specific types of CSS selectors like the id selector, class selector, universal selector, and the grouping selector. Then I will move on to explaining how you can insert CSS into HTML elements. I will describe three general ways to insert CSS style sheets into an HTML document. The three ways are internal CSS, external CSS, and inline CSS. \*I'll shed comprehensive light on CSS Margins, Width, and Padding. You will learn how to adjust the margins and padding around your content. I have added many code examples with their results in the browser so that you will find it easy to study the code and recreate it with your values and ideas. \*Then I will focus on CSS borders as well as backgrounds. You can adjust the width of the CSS border, its colors, and its thickness. Then I will move on to explain CSS backgrounds. You will learn how you can add colors to the background of your web page.\*I'll cover CSS texts and walk you through adjusting font-size, font-style, and font-weight. You will learn different ways to style the font and adjust the weight of the text on the web page. \*You will learn how you can set the colors of the

web page. There are different kinds of adjusting the colors on your web page by various methods such as RGB value, HEX value, and HSL value. In the end, I will explain the alpha factor. Let it be a surprise. \*We'll review the CSS outline, boxes, tables, and forms. You will learn how to style outlines and how to contain pieces of text inside boxes. \*I'll cover the styling CSS links. You will learn how to fill tables with different colors and also how to make the forms look good.\*And I'll cover CSS images and lists. You will learn about styling the images, such as displaying them in a round shape or square shape, inside the text, or at the start of the paragraph. Then comes lists. You will learn how to add colors to your lists and make them less boring. \*Learn how to make things pretty with rounded corners on your webpage. You will learn to shape them by different methods in different forms, like elliptical and slightly rounded. \*I'll also focus on the layout, float, and inline-block properties of CSS. You will learn how to position the content of the webpage as per your requirements. \*In the last chapter of the book I cover the navigation bar. This is an exhaustive chapter, which will explain different types of navigation bars like vertical and horizontal. You will also learn how to create fixed and sticky navigation bars. Who This Book is For This book is written for those who need to build a website but do not know where to start. Whether it is for a school project, a business, or helping friends and family, this book can help you to get started. By the end of this book, you will be able to create a website that not only looks good, but also works well when viewed on both computers and mobile devices. You do not need any prior knowledge in programming to be able to follow the lessons in this book. It is written with the assumption that this is your first foray into web development. However, it does require that you know how to use a computer and how to use a text editor for basic editing, such as copying and pasting text.

What You Can Expect from This Book Aimed at absolute beginners, you can expect the lessons to be delivered in a step-by-step fashion, with a lot of examples and illustrations. The book will avoid technical terms whenever possible, to keep things simple and easy to understand. The lessons will cover HTML, CSS and Bootstrap 4. All of the programming code used in the examples will be provided to you. To get the code, all you need to do is a simple copy and paste. If the examples use images, the image files will be provided as well. Every chapter is geared towards creating the building blocks that you will need to build your websites, such as navigation menu, buttons, forms and more. After all the lessons, you will be able to put together enough building blocks to create a decent website.

A Beginner's Guide to Computer Programming Start

Programming Using HTML, CSS, and JavaScript is a manual for undergraduate students in engineering and the natural sciences to discover how computer programming works. Using a dialog format between two students and a professor, the text teaches students how the mainstream web languages HTML, CSS, and JavaScript interact and how to harness their capabilities in practical settings. Each chapter focuses on a specific theme supported by a gradual development of engaging worked examples of live web documents and applications using the three languages. Students can follow most of the examples and experiments using any modern browser and plain text editor. A practical homework problem is included at the end of every chapter and then is discussed at the beginning of the next chapter. In addition, a related keywords list helps students review key topics. By focusing on important established principles and concrete examples, this introductory book shows students how to write cleaner and more easily maintainable code. It augments the basic language syntax and rules with contents and structure while keeping the material simple and manageable.
