Rantoul and the former Chanute Air Force Base are inseparably intertwined as primary players in a single historical narrative. Rantoul was first founded as an agriculturally based community in 1848 near an area known as Mink Grove. The settlement boomed with the coming of the Illinois Central Railroad in 1854; a railroad championed by the town's namesake, Robert Rantoul Jr. Disaster followed in 1899 and again in 1901 with devastating fires. Then, in 1917, a U.S. Army flying field was built on the outskirts of Rantoul. Named after the aviation pioneer Octave Chanute, Chanute Field, later Chanute Air Force Base, became a premier technical training facility. A mutually beneficial relationship quickly developed between these civilian and military establishments that would last for over 75 years. Chanute Air Force Base closed in 1993, ushering in yet another new era for the village of Rantoul.

Sacred Cows

Did you know God forbids the tying of shoelaces on Saturday? Or that humans emit an color aura which can only be discerned with a Third Eye? That bountiful harvest requires the flinging of a live goat from a church bell tower? That instead of wishing upon a star, we can wish upon a cow? Well into the 21st century, our species continues to participate in beliefs and customs that seem more suited to the Bronze Age than the Information Age, some of which involve poisonous snakes, holy smoke, urine bubbles, crystals, tarot cards, aliens, costumed virgins and, of course, an offering plate. Join Seth Andrews for a random romp across the planet and a humorous look at some of humanity's sacred cows.

Trace Elements in Obstetrics and Gynecology

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency

standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.

In CookWise, food sleuth Shirley Corriher tells you how and why things happen in cooking. When you know how to estimate the right amount of baking powder, you can tell by looking at the recipe that the cake is overleavened and may fall. When you know that too little liquid for the amount of chocolate in a recipe can cause the chocolate to seize and become a solid grainy mass, you can spot chocolate truffle recipes that will be a disaster. And, in both cases, you know exactly how to "fix" the recipe. Knowing how ingredients work, individually and in combination, will not only make you more aware of the cooking process, it will transform you into a confident and exceptional cook—a cook who is in control. CookWise is a different kind of cookbook. There are more than 230 outstanding recipes—from Snapper Fingers with Smoked Pepper Tartar Sauce to Chocolate Stonehenge Slabs with Cappuccino Mousse—but here each recipe serves not only to please the palate but to demonstrate the roles of ingredients and techniques. The What This Recipe Shows section summarizes the special cooking points being demonstrated in each recipe. This little bit of science in everyday language indicates which steps or ingredients are vital and cannot be omitted without consequences. No matter what

your cooking level, you'll find CookWise a revelation.

Drawing from his extensive business management experience, Pradip Chand turns traditional wisdom on its head when he proposes that Brand Loyalty is inversely proportional to the income and education levels of the 'knowledge consumer'. He examines how and why brands become strategic assets, traces the evolution of the knowledge consumer and what can companies do to protect equity of the brands they have nurtured over the decades. A new approach to building a Brand Loyalty that gives marketers a competitive edge in today's high-tech, high-stake brand-hostile environment. The book combines the knowledge with engaging real life case studies and proven examples.

Preserving New York is the largely unknown inspiring story of the origins of New York City's nationally acclaimed landmarks law. The decades of struggle behind the law, its intellectual origins, the men and women who fought for it, the forces that shaped it, and the buildings lost and saved on the way to its ultimate passage, span from 1913 to 1965. Intended for the interested public as well as students of New York City history, architecture, and preservation itself, over 100 illustrations

help reveal a history richer and more complex than the accepted myth that the landmarks law sprang from the wreckage of the great Pennsylvania Station. Images include those by noted historic photographers as well as those from newspaper accounts of the time. Forgotten civic leaders such as Albert S. Bard and lost buildings including the Brokaw Mansions, are unveiled in an extensively researched narrative bringing this essential episode in New York's history to future generations tasked with protecting the city's landmarks. For the first time, the story of how New York won the right to protect its treasured buildings, neighborhoods and special places is brought together to enjoy, inform, and inspire all who love New York.

Just a Spoonful of Laughter Helps the Medicine Go Down

Show biz memoir at its name-dropping, bridge-burning, profane best: the music industry's most outspoken, outrageous, and phenomenally successful executive delivers a rollicking memoir of pop music's heyday. During the 1970s and '80s the music business was dominated by a few major labels and artists such as Michael Jackson, Bruce Springsteen, the Rolling Stones, Bob Dylan, Billy Joel, Paul Simon, Barbra Streisand and James Taylor. They were all under contract to CBS Records, making it the most successful label of the era. And, as the company's president, Walter Yetnikoff was the ruling monarch. He was also the most flamboyant, volatile and controversial personality to emerge from an industry and era defined by sex, drugs and debauchery. Having risen from working-class Brooklyn and the legal department of CBS, Yetnikoff, who freely admitted to being tone deaf, was an unlikely label head. But he had an uncanny knack for fostering talent and intimidating rivals with his appalling behavior—usually fueled by an explosive combination of cocaine and alcohol. His tantrums, appetite for mind-altering substances and sexual exploits were legendary. In Japan to meet the Sony executives who acquired CBS during his tenure, Walter was assigned a minder who confined him to a hotel room. True to form, Walter raided the minibar, got blasted and, seeing no other means of escape, opened a hotel window and vented his rage by literally howling at the moon. In *Howling at the Moon*, Yetnikoff traces his journey as he climbed the corporate mountain, danced on its summit and crashed

and burned. We see how Walter became the father-confessor to Michael Jackson as the King of Pop reconstructed his face and agonized over his image while constructing Thriller (and how, after it won seven Grammys, Jackson made the preposterous demand that Walter take producer Quincy Jones's name off the album); we see Walter, in maniacal pursuit of a contract, chase the Rolling Stones around the world and nearly come to blows with Mick Jagger in the process; we get the tale of how Walter and Marvin Gaye—fresh from the success of “Sexual Healing”—share the same woman, and of how Walter bonds with Bob Dylan because of their mutual Jewishness. At the same time we witness Yetnikoff's clashes with Barry Diller, David Geffen, Tommy Mottola, Allen Grubman and a host of others. Seemingly, the more Yetnikoff feeds his cravings for power, sex, liquor and cocaine, the more profitable CBS becomes—from \$485 million to well over \$2 billion—until he finally succumbs, ironically, not to substances, but to a corporate coup. Reflecting on the sinister cycle that left his career in tatters and CBS flush with cash, Yetnikoff emerges with a hunger for redemption and a new reverence for his working-class Brooklyn roots. Ruthlessly candid, uproariously hilarious and compulsively readable, *Howling at the Moon* is a blistering *You'll Never Eat Lunch in this Town Again* of the music industry.

Poignant, touching, and lively, this memoir of a woman who loses her mother and creates a new life for herself in Paris will speak to anyone who has lost a parent or reinvented themselves. Lisa Anselmo wrapped her entire life around her mother, a strong woman who was a defining force in her daughter's life—maybe too defining. When her mother dies from breast cancer, Lisa realizes she hadn't built a life of her own, and struggles to find her purpose. Who is she without her mother—and her

mother's expectations? Desperate for answers, she reaches for a lifeline in the form of an apartment in Paris, refusing to play it safe for the first time. What starts out as a lurching act of survival sets Lisa on a course that reshapes her life in ways she never could have imagined. But how can you imagine a life bigger than anything you've ever known? In the vein of *Eat, Pray, Love* and *Wild, My (Part-time) Paris Life* a story is for anyone who's ever felt lost or hopeless, but still holds out hope of something more. This candid memoir explores one woman's search for peace and meaning, and how the ups and downs of expat life in Paris taught her to let go of fear, find self-worth, and create real, lasting happiness.

In *Politics as a Science*, two of the world's leading authorities on Comparative Politics, Philippe C. Schmitter and Marc Blecher, provide a lively introduction to the concepts and framework to study and analyze politics. Written with dexterity, concision and clarity, this short text makes no claim to being scientific. It contains no disprovable hypotheses, no original collection of evidence and no search for patterns of association. Instead, Schmitter and Blecher keep the text broadly conceptual and theoretical to convey their vision of the sprawling subject of politics. They map the process in which researchers try to specify the goal of the trip, some of the landmarks likely to be encountered en route and the boundaries that will circumscribe the effort. Examples, implications and elaborations are included in footnotes throughout the book. *Politics as a Science* is an ideal

introduction for anyone interested in, or studying, comparative politics. “The Open Access version of this book, available at <http://www.taylorfrancis.com/doi/view/10.4324/9781003032144>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.”

The Power of Understanding Yourself

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention.

Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).
