This is a volume about the life and power of ritual objects in their religious ritual settings. In this Special Issue, we see a wide range of contributions on material culture and ritual practices across religions. By focusing on the dynamic

interrelations between objects, ritual, and belief, it explores how religion happens through symbolic materiality. The ritual objects presented in this volume include: masks worn in the Dogon dance; antique ecclesiastical silver objects carried around in festive processions and shown in shrines in the southern Andes; funerary photographs and films functioning as mnemonic objects for grieving children; a dented rock surface perceived to be the god's footprint in the archaic place of pilgrimage, Gaya (India); a recovered manual of rituals (from Xiapu county) for Mani, the founder of Manichaeism, juxtaposed to a Manichaean painting from southern China; sacred stories and related sacred stones in the Alor-Pantar archipelago, Indonesia; lotus symbolism, indicating immortalizing plants in the mythic traditions of Egypt, the Levant, and Mesopotamia; lavishly illustrated variations of portrayals of Ravana, a Sinhalese god-king-demon; figurines made of cow dung sculptured by rural women in Rajasthan (India); and mythical artifacts called 'Apples of Eden' in a well-known interactive game series.

A WALL STREET JOURNAL BESTSELLER Do you know the best way to drive your company's growth? If not, it's time to boost your Growth IQ. Trying to find the one right move that will improve your business's performance can feel overwhelming. But, as you'll discover in Growth IQ, there are just ten simple--but easily misunderstood--paths to growth, and every successful growth strategy can be boiled down to picking the right combination and sequence of these paths for your current context. Tiffani Bova travels around the world helping companies solve their most vexing problem: how to keep growing in the face of stiff competition and a fast-changing business environment. Whether she's presenting to a Fortune 500 board of directors or brainstorming over coffee with a startup founder, Bova cuts through the clutter and confusion that surround growth. Now, she draws on her decades of experience and more than thirty fascinating, in-depth business stories to demonstrate the opportunities--and pitfalls--of each of the ten growth paths, how they work together, and how they apply to business today. You'll see how, for instance: * Red Bull broke Coca-Cola and PepsiCo's stranglehold on the soft drink market by taking the Customer Base Penetration path to establish a foothold with adventure sports junkies and expand into the mainstream. * Marvel transformed itself from a struggling comic book publisher into a global entertainment behemoth by using a Customer and Product Diversification strategy and shifting their focus from comic books to comic book characters in movies. * Starbucks suffered a brand crisis when they overwhelmed their customers with a Product Expansion

strategy, and brought back CEO Howard Schultz to course-correct by returning to the Customer Experience path. Through Bova's insightful analyses of these and many other case studies, you'll see why it can be a mistake to imitate strategies that worked for your competitors, or rely on strategies that worked for you in the past. To grow your company with confidence, you first need to grow your Growth IQ.

Coordinate Geometry

Chemical nomenclature has attracted attention since the beginning of chemistry, when the need to exchange knowledge was first recognised. The responsibility for providing nomenclature to the chemical community was assigned to the International Union of Pure and Applied Chemistry, whose Rules for Inorganic Nomenclature were published and revised in 1958 and 1970. Since then many new compounds have appeared, particularly with regard to coordination chemistry and boron chemistry, which were difficult to name using the 1970 Rules. Consequently, the IUPAC Commission on the Nomenclature of Inorganic Chemistry decided to thoroughly revise the last edition of the 'Red Book'. As many of the new fields of chemistry are very highly specialised and require complex nomenclature, the revised edition is in two parts. Whilst Part I is mainly concerned with general inorganic chemistry, this volume, Part II, addresses such diverse chemistry as polyanions, isotopic modification, tetrapyrroles, nitrogen hydrides, inorganic ring, chain, polymer, and graphite intercalation compounds. The recommendations bring order to the nomenclature of these specialised systems, based on the fundamental nomenclature described in Part I and the organic nomenclature publications. Each chapter has been subject to extensive review by members of IUPAC and practising chemists in various areas.

Thirty Days to Better English

Before entering higher education, most students' learning experiences have been traditional and teacher-centered. Their teachers have typically controlled their learning, with students having had little say about what and how to learn. For many students, encountering a learner-centered environment will be new, possibly unsettling, and may even engender resistance and hostility. Taking as his starting point students' attitudes toward, and unfamiliarity with, learner-centered classrooms, Terry Doyle explains that motivating students to engage with this practice first of all requires explaining its underlying rationale, and then providing guidance on how to learn in this environment. This book is about how to help students acquire the new skills and knowledge they need to take on unfamiliar roles and responsibilities. It is informed by the author's extensive experience in managing learner-centered classes, and by his consultation work with faculty. The first four chapters focus on the importance of imparting to students the evidence and underlying philosophy that is driving higher education to move from a teacher-centered to a learner-centered practice, and what this means for students in terms of

having control over, and making important choices about, their learning. The final eight chapters focus on how to impart the skills that students need to learn or hone if they are to be effective learners in an environment that is new to them. The book covers such practices as learning on one's own; creating meaningful learning when collaborating with others; peer teaching; making presentations; developing life long learning skills; self and peer evaluation; and give meaningful feedback. This book provides a rich and informative answer to the fundamental question: how do I help my students adjust to a learner-centered practice?

Helping Students Learn in a Learner-Centered Environment

The Foundation series of Mathematics Class:9

India is in the throes of great developments in the field of higher education. This book identifies the needs and gaps in this sector and provides suggestions for improvement based on the lessons learnt from the experiences of other countries. It facilitates a clear and holistic understanding of the sector's complex nature and breaks several myths related to it. The availability of quality higher education in India, though increasing, is unable to meet the demands of a growing youth population, improvements in school education and a growing middle class. At the same time, it has been widely recognised that the country has a unique opportunity to convert its demographic surplus into its economic strength by providing its young people the right kind of skills. Following this understanding, and due to the persisting problems in the sector, higher education now occupies a central position in the country's strategy for global competitiveness and inclusive growth, and several steps have been taken for its improvement. Apart from an analysis of the prevailing situation, the author also suggests a framework for the creation of a competitive environment in higher education that would ensure better utilisation of public funds and improvement of both public and private institutions. This book will be a valuable resource for centres of education and higher education in universities and research organisations, as well as think-tanks. It would also be a useful tool for consultants and private organisations working in the higher education sector.
