Case Study Research: Principles and Practices aims to provide a general understanding of the case study method as well as specific tools for its successful implementation. These tools can be utilized in all fields where the case study method is prominent, including business, anthropology, communications, economics, education, medicine, political science, social work, and sociology. Topics include the definition of a 'case study,' the strengths and weaknesses of this

distinctive method, strategies for choosing cases, an experimental template for understanding research design, and the role of singular observations in case study research. It is argued that a diversity of approaches - experimental, observational, qualitative, quantitative, ethnographic - may be successfully integrated into case study research. This book breaks down traditional boundaries between qualitative and quantitative, experimental and nonexperimental, positivist and interpretivist.

The HR Value Proposition

Improving Productivity at Work

The use of case studies to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study methodology: an emphasis on the importance of within-case analysis, a detailed discussion of process tracing, and development of the concept of typological theories. Case Studies and Theory Development in the

Social Sciences will be particularly useful to graduate students and scholars in social science methodology and the philosophy of science, as well as to those designing new research projects, and will contribute greatly to the broader debate about scientific methods.

While heated arguments between practitioners of qualitative and quantitative research have begun to test the very integrity of the social sciences, Gary King, Robert Keohane, and Sidney Verba have produced a farsighted and timely book that promises to sharpen and strengthen a wide range of research performed in this field. These leading scholars, each representing diverse academic traditions, have developed a unified approach to valid descriptive and causal inference in qualitative research, where numerical measurement is either impossible or undesirable. Their book demonstrates that the same logic of inference underlies both good quantitative and good qualitative research designs, and their approach applies equally to each. Providing precepts intended to stimulate and discipline thought, the authors explore issues related to framing research questions, measuring the accuracy of data and uncertainty of empirical inferences, discovering causal effects, and generally improving qualitative research. Among the specific topics they address are interpretation and inference, comparative case studies, constructing causal theories, dependent and explanatory variables, the limits of random selection, selection bias, and errors in measurement. Mathematical notation is occasionally used to clarify concepts, but no prior knowledge of mathematics or statistics is assumed. The unified logic of inference that this book explicates will be enormously useful to qualitative researchers of all traditions and substantive fields.

Supervision: Concepts and Practices of Management

Designing Social Inquiry

Human resource (HR) governance is a relatively new construct that has recently begun attracting more and more attention in both research and practice. As a part of corporate governance, it represents the internal and external normative framework of human resource management and its supervision in organizations.

This book theoretically integrates HR governance with the related domains of corporate governance, general management, HR management, and leadership. By doing so, it provides scholars and practitioners in the field with a precisely delineated system of theoretical concepts for their work and helps to translate these concepts into concrete research questions and practical guidelines. By interpreting the new ISO 30408 norm on human governance and taking into account recent developments, the book helps to comply with and anticipate current and future HR regulations.

A critical mapping of the multiplicities of Finnish artist and technology pioneer Erkki Kurenniemi—composer of electronic music, experimental filmmaker, inventor, collector, futurologist. Over the past forty years, Finnish artist and technology pioneer Erkki Kurenniemi (b. 1941) has been a composer of electronic music, experimental filmmaker, computer animator, roboticist, inventor, and futurologist. Kurenniemi is a hybrid—a scientist-humanist-artist. Relatively unknown outside Nordic countries until his 2012 Documenta 13 exhibition, "In 2048," Kurenniemi may at last be achieving international recognition. This book offers an excavation, a critical mapping, and an elaboration of Kurenniemi's multiplicities. The contributors describe Kurenniemi's enthusiastic, and rather obsessive, recording of everyday life and how this archiving was part of his

process; his exploratory artistic practice, with productive failure an inherent part of his method; his relationship to scientific and technological developments in media culture; and his work in electronic and digital music, including his development of automated composition systems and his “video-organ,” DIMI-O. A “Visual Archive,” a section of interviews with the artist, and a selection of his original writings (translated and published for the first time) further document Kurenniemi's achievements. But the book is not just about one artist in his time; it is about emerging media arts, interfaces, and archival fever in creative practices, read through the lens of Kurenniemi.

Research paper from the year 2010 in the subject Business economics - Business Management, Corporate Governance, University of Zagreb (Institute of Economics), course: MBA - Human resources management and development, language: English, abstract: Contemporary business management is based on management of resources, particularly human resources. Planning, recruiting and selecting candidates are key human resource functions. Business leaders are continuously engaged in the process of reconsidering roles and goals, managing the business in the most appropriate way. Selection, based upon internal candidates recruitment was a rule in a lack of certain employees profiles. But, solving the human resources insufficiency problem, we often refocus our attention to external candidates

recruitment and selection. Besides contacts and collaboration with media and recruitment agencies, we also need strengthening of our own potentials. Selection through our own human resource department or engagement of selection agency / professionals is a routine, but when we have to cope with several constraints like human resources and financial resources limits, then we have to rely on selection approach more flexible and adaptive to occasions. Media support, at least an adequate Internet promotion, lead to rising number of candidates applications. But choice of the right candidate is the art, we have to accept the fact. 3 C concept (Cost, communication, and concept itself) may help in improvizing our candidate selection process. Internet ensures wide communication to candidates, through social networks and Internet generally, but is not enough when focusing our attention to candidates and their potential. In order to ensure choosing the right one, or at least to follow the rule - not to choose "the wrong" candidate nor to exclude "the right one." Systematic approach ensures planned results and candidates choices, so we have to be aware of the fact that further development and focus onto new pot

The international best seller Human Resource Champions helped set the HR agenda for the 1990s and enabled HR professionals to become strategic partners in their organizations. But earning a seat at the executive table was only the

beginning. Today's HR leaders must also bring substantial value to that table. Drawing on their 16-year study of over 29,000 HR professionals and line managers, leading HR experts Dave Ulrich and Wayne Brockbank propose The HR Value Proposition. The authors argue that HR value creation requires a deep understanding of external business realities and how key stakeholders both inside and outside the company define value. Ulrich and Brockbank provide practical tools and worksheets for leveraging this knowledge to create HR practices, build organizational capabilities, design HR strategy, and marshal resources that create value for customers, investors, executives, and employees. Written by the field's premier trailblazers, this book charts the path HR professionals must take to help lead their organizations into the future. Ulrich is a professor at the University of Michigan School of Business and the author of 12 books and more than 100 articles on the subject of human resources. Brockbank is a clinical professor of business at the University of Michigan School of Business, the author of award-winning papers on HR strategy, and an adviser to top global organizations.

Applied Human Relations

Fundamentals of Human Resource Management, by Noe, Hollenbeck, Gerhart and Wright is specifically written to provide a complete introduction to human resource management. While it doesn't cover the depths of human resource management theory, the book is rich with examples and engages students through application. Fundamentals differs from the hardback textbook by the same author team. Instead of a higher level of theory that's geared towards the HRM majors, this book focuses on the uses of human resources for the general business manager. Issues such as strategy are reduced to give a greater focus on how human resources management is used in the everyday work environment. It provides students with

the background necessary to manage human resources effectively and to be able to distinguish good from poor human resource management practices and how they impact business. Instructors are provided with a robust ancillary package that includes a comprehensive instructor's manual, test bank, PowerPoint presentation and a complete Online Learning Center to make course preparation easy.

Mathematical Modelling with Case Studies: Using Maple™ and MATLAB®, Third Edition provides students with hands-on modelling skills for a wide variety of problems involving differential equations that describe rates of change. While the book focuses on growth and decay processes, interacting populations, and heating/cooling problems, the mathematical techniques presented can be applied to many other areas. The text carefully details the process of constructing a model,

including the conversion of a seemingly complex problem into a much simpler one. It uses flow diagrams and word equations to aid in the model-building process and to develop the mathematical equations. Employing theoretical, graphical, and computational tools, the authors analyze the behavior of the models under changing conditions. The authors often examine a model numerically before solving it analytically. They also discuss the validation of the models and suggest extensions to the models with an emphasis on recognizing the strengths and limitations of each model. The highly recommended second edition was praised for its lucid writing style and numerous real-world examples. With updated MapleTM and MATLAB[®] code as well as new case studies and exercises, this third edition continues to give students a clear, practical understanding of the development and interpretation of mathematical models.
