Bruce Barton is the most famous twentieth-century American without a biography. Richard Fried's compelling new study captures the full dimensions of Barton's varied and fascinating life. More than a popularizer of the entrepreneurial Jesus, he was a prolific writer of novels, magazine articles, interviews with mighty, pithy editorials of uplift. He edited a weekly magazine that anticipated the format of Life. Most famously, he co-founded the advertising agency that became Batten, Barton, Durstine and Osborn and grew to symbolize Madison Avenue.

endeavored to make the workings of American Government interesting and accessible to students while maintaining the conceptual coverage and rigor inherent in the subject at the college level. With this objective in mind, the content of this textbook has been developed and arranged to provide a logical progression from the fundamental principles of institutional design at the founding, to avenues of political participation, to thorough coverage of the political structures that constitute American government. The book builds upon what students have already learned and emphasizes connections between topics as well as between theory and applications. The goal of each section is to enable students not just to recognize concepts, but to work with them in ways that will be useful in later courses, future careers, and as engaged citizens. The organization and pedagogical features were developed and vetted with feedback from American government instructors dedicated to the project.

A world of "smart" devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction, can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless

cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In [Click Here to Kill Everybody](#), renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.

entertaining and inspiring follow-up to *Love Does*, Bob Goff takes readers on a journey into the secret of living without fear, constraint, or worry. This liberated existence we all long for is as simple to say as it is difficult to do: we are called to love everybody, always – even when it’s really difficult. Driven by Bob’s trademark storytelling, *Everybody, Always* reveals the lessons Bob learned--often the hard way--about what it means to love without inhibition, insecurity, or restriction. From finding the right friends to discovering the upside of failure, *Everybody, Always* points the way to embodying love by doing the unexpected, the intimidating, the seemingly impossible. Whether losing his shoes while skydiving solo or befriending a Ugandan witch doctor, Bob steps into life with a no-limits embrace of others that is as infectious as it is extraordinarily ordinary. *Everybody, Always* reveals how we can do the same.

What is feminism? In this short, accessible primer, bell hooks explores the nature of feminism and its positive promise to eliminate sexism, sexist exploitation, and oppression. With her characteristic clarity and directness, hooks encourages readers to see how feminism can touch and change their lives—to see that feminism is for everybody.

American Government

Foreword by Steven Pinker Blending the informed analysis of *The Signal and the Noise* with the instructive iconoclasm of *Think Like a Freak*, a fascinating, illuminating, and witty look at what the vast amounts of information now instantly available to us reveals about ourselves and our world—provided we ask the right questions. By the end of an average day in the early twenty-first century, human beings searching the internet will amass eight trillion gigabytes of data. This staggering amount of information—unprecedented in history—can tell us a great deal about who we are—the fears, desires, and behaviors that drive us, and the conscious and unconscious decisions we make. From the profound to the mundane, we can gain astonishing knowledge about the human psyche that less than twenty years ago, seemed unfathomable. *Everybody Lies* offers fascinating, surprising, and sometimes laugh-out-loud insights into everything from economics to ethics to sports to race to sex, gender and more, all drawn from the world of big data. What percentage of white voters didn't vote for Barack Obama because he's black? Does where you go to school effect how successful you are in life? Do parents secretly favor boy children over girls? Do violent films affect the crime rate? Can you beat the stock market? How regularly do we lie about our sex lives and who's more self-conscious about sex, men or women? Investigating these questions and a host of others, Seth Stephens-Davidowitz offers revelations that can help us understand ourselves and our lives better.

Drawing on studies and experiments on how we really live and think, he demonstrates in fascinating and often funny ways the extent to which all the world is indeed a lab. With conclusions ranging from strange-but-true to thought-provoking to disturbing, he explores the power of this digital truth serum and its deeper potential—revealing biases deeply embedded within us, information we can use to change our culture, and the questions we're afraid to ask that might be essential to our health—both emotional and physical. All of us are touched by big data everyday, and its influence is multiplying. *Everybody Lies* challenges us to think differently about how we see it and the world.

What's Your Point of View, Grades 6-12

"An award-winning New York Times reporter Dr. Elisabeth Rosenthal reveals the dangerous, expensive, and dysfunctional American healthcare system, and tells us exactly what we can do to solve its myriad of problems. It is well documented that our healthcare system has grave problems, but how, in only a matter of decades, did things get this bad? Dr. Elisabeth Rosenthal doesn't just explain the symptoms; she diagnoses and treats the disease itself. Rosenthal spells out in clear and practical terms exactly how to decode medical doublespeak, avoid the pitfalls of the pharmaceuticals racket, and get the care you and your family deserve. She takes you inside the doctor-patient relationship, explaining step by step the workings of a profession sorely lacking transparency. This is about what we can do, as

individual patients, both to navigate a byzantine system and also to demand far-reaching reform. Breaking down the monolithic business into its individual industries--the hospitals, doctors, insurance companies, drug manufacturers--that together constitute our healthcare system, Rosenthal tells the story of the history of American medicine as never before. The situation is far worse than we think, and it has become like that much more recently than we realize. Hospitals, which are managed by business executives, behave like predatory lenders, hounding patients and seizing their homes. Research charities are in bed with big pharmaceutical companies, which surreptitiously profit from the donations made by working people. Americans are dying from routine medical conditions when affordable and straightforward solutions exist. Dr. Rosenthal explains for the first time how various social and financial incentives have encouraged a disastrous and immoral system to spring up organically in a shockingly short span of time. The system is in tatters, but we can fight back. An American Sickness is the frontline defense against a healthcare system that no longer has our well-being at heart"--

Everybody, Always

The focus of this inquiry, by the Science and Technology Committee, was the support by the UK Government for the Beagle 2 project developed as part of the European Space Agency's (ESA) Mars Express mission. The Committee found the Government showed enthusiasm for this project, but was unable to provide a guaranteed financial backing for the development of a lander, resulting in a failure to secure sufficient sponsorship income, which was subsequently seen to have a detrimental impact on the project's success. The Committee feels, that Government needs to put in place a system that can deal with major financial commitments at short notice. In hindsight, the development of the lander and orbiter separately is seen as wrong, impeding the flexible co-ordination of the mission, leading to tensions between the Beagle 2 consortium, ESA and other contractors. Further, there was a lack of co-ordinated oversight between these three groups, and therefore a failure to identify important weaknesses in the mission. Despite the failure of Beagle, the Committee does see some positive potential for future projects, both in scientific and educational

Here Comes Everybody

A sobering account of a disenfranchised American working class and important policy solutions to the nation's economic inequalities. One of the country's leading scholars on economics and social policy, Isabel Sawhill addresses the enormous divisions in American society--economic, cultural, and political--and what might be done to bridge them. Widening inequality and the loss of jobs to trade and technology has left a significant portion of the American workforce disenfranchised and skeptical of governments and corporations alike. And yet both

have a role to play in improving the country for all. Sawhill argues for a policy agenda based on mainstream values, such as family, education, and work. Although many have lost faith in government programs designed to help them, there are still trusted institutions on both the local and the federal level that can deliver better job opportunities and higher wages to those who have been left behind. At the same time, the private sector needs to reexamine how it trains and rewards employees. This book provides a clear-headed and middle-way path to a better-functioning society in which personal responsibility is honored and inclusive capitalism and more broadly shared growth are once more the norm.
