Parents of middle class family dream their children to be a part in Administrative services, without taking least care of their children's personal interest. So was the case with Rajan, the slum hero of the novel. He had dreams of his own, but something disastrous happened that changed his life. He failed miserably in his high school exam, passing with poor marks that led his father to issue the 'farmaan' that he would peruse his further studies with art stream (just opposite to his expectations, anyway he never wished to study art like girls). But something worse was yet to come. In order to convince a girl for his friend, he fell in love with that girl, who was daughter of a devil in man, Kalicharan, the M.P. After passing their graduation, both prepare for IAS exam. He takes it as T20 championship and as Indian cricket team would do, he also lost, but till then he had gathered treasure worth billions. His dream girl overcomes the hurdle but there're more hurdles waiting in their love story and future. There're two arch enemies, their respective fathers. Kalicharan & Karia Anna are the main

obstacles in their way. A central concern of number theory is the study of local-to-global principles, which describe the behavior of a global field K in terms of the behavior of various completions of K . This book looks at a specific example of a local-to-global principle: Weil's conjecture on the Tamagawa number of a semisimple algebraic group G over K . In the case where K is the function field of an algebraic curve X , this conjecture counts the number of G -bundles on X (global information) in terms of the reduction of G at the points of X (local information). The goal of this book is to give a conceptual proof of Weil's conjecture, based on the geometry of the moduli stack of G -bundles. Inspired by ideas from algebraic topology, it introduces a theory of factorization homology in the setting l -adic sheaves. Using this theory, Dennis Gaitsgory and Jacob Lurie articulate a different local-to-global principle: a product formula that expresses the cohomology of the moduli stack of G -bundles (a global object) as a tensor product of local factors. Using a version of the Grothendieck-Lefschetz trace formula, Gaitsgory and Lurie show that this product formula implies Weil's conjecture. The proof of the product formula will appear in a sequel volume.
