Children's Play, Learning and Development

Essential Public Affairs for Journalists is an invaluable guide for both journalism students and practising journalists. It takes readers through details of the constitutional framework and the governing institutions of the UK; covers the NHS, the Treasury, industry, utilities, social security and home affairs; explores the role of the UK in the EU and the wider world of international relations; and focuses on local government issues and how these can generate a wealth of stories for the student and professional journalist alike. The fourth edition has been updated with details of the cuts programme; coverage of the continuing debate over the rise of UKIP and Britain's future in the European Union; and an assessment of the immediate aftermath of the referendum on Scottish independence. There is clearer end of chapter guidance on the key issues students need to consider for the NCTJ essential public affairs course and a tighter focus on the material covered in the revised syllabus. The extensive pedagogy uses new examples to inspire students in the development of their own stories. OECD Reviews of Vocational Education and Training Apprenticeship in England, United Kingdom

Responding to widespread interest within cultural studies and social inquiry, this book addresses the question 'what is a mathematical concept?' using a variety of vanguard theories in the humanities and posthumanities. Tapping historical, philosophical, sociological and psychological perspectives, each chapter explores the question of how mathematics comes to matter. Of interest to scholars across the usual disciplinary divides, this book tracks mathematics as a cultural activity, drawing connections with empirical practice. Unlike other books in this area, it is highly interdisciplinary, devoted to exploring the ontology of mathematics as it plays out in different contexts. This book will appeal to scholars who are interested in particular mathematical habits - creative diagramming, structural mappings, material agency, interdisciplinary coverings - that shed light on both mathematics and other disciplines. Chapters are also relevant to social sciences and humanities scholars, as each offers philosophical insight into mathematics and how we might live mathematically.

How to Achieve in Maths

How to Achieve in Maths is written by the owner of the YouTube Channel Achieve Maths. The purpose of the book is to inspire students of Mathematics with a fresh approach to the subject and to help them in their journey of achieving their full potential in Maths. It is suitable for those preparing for their GCSE Maths or A-level Maths exams, or simply those who want to see Maths education from a new perspective. Many students see maths as inaccessible and difficult, I see it as exciting and enticing. Why are there such differing views of the same thing? Why do some people dread numbers and anything maths related, while others thrive on the challenges of the subject? In this book, I aim to address these inconsistencies and look at how to see maths in a way that will allow you to enjoy your studies and work towards success with purpose and determination. The book contains six chapters, the first four chapters outline how to see maths in a positive light and give action steps to help you to achieve success. The penultimate chapter is a selection of carefully crafted, original exam style questions to allow the reader to put into practice what they have learnt. The final chapter has detailed worked solutions to the questions and talks the reader through the best way to approach and answer them.

Edexcel GCSE (9-1) Mathematics: Higher Student Book

The 2012 GCSE English results prompted significant controversy, which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007-09 development phase of the qualification- in particular the turbulence which resulted from the shift away from a mostly linear to a modular system, combined with a high proportion of controlled assessment and generous marking tolerances. Exam board experts raised concerns at the time, but these were not acted upon by the regulator (the then-interim Ofqual). Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening, with consequences for grade awarding. The current status of Ofqual, as an independent regulator accountable to Parliament, is the right one. However, the Coalition Government is bringing in

wholesale changes to GCSEs and A levels, to a tight timetable and at the same time. Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England, Wales and Northern Ireland, without careful reflection on what might be lost, or consensus that this is the right thing to do.
