Includes information from the Checklist of official publications of the State of New York.

### **Biology, the Science of Life**

Based on his correspondence, a 1908 biography of one of the late nineteenth century's most influential and controversial thinkers.

### **Bibliography of Society, Ethics and the Life Sciences**

What are the impacts of population growth? Can our planet support the demands of the ten billion people anticipated to be the world's population by the middle of this century? While it is common to hear about the problems of overpopulation, might there be unexplored benefits of increasing numbers of people in the world? How can we both consider and harness the potential benefits brought by a healthier, wealthier and larger population? May more people mean more scientists to discover how our world works, more inventors and thinkers to help solve the world's problems, more skilled people to put these ideas into practice? In this book, leading academics with a wide range of expertise in demography, philosophy, biology, climate science, economics and environmental sustainability explore the contexts, costs and benefits of a burgeoning population on our economic, social

and environmental systems.

**Official Publications of the State of New York**

**Is the Planet Full?**

Our daily news bulletins bring us tales of the wonder of science, from Mars rovers and intelligent robots to developments in cancer treatment, and yet often the emphasis is on the potential threats posed by science. It appears that irrationality is on the rise in western society, and public opinion is increasingly dominated by unreflecting prejudice and unwillingness to engage with factual evidence. From genetically modified crops and food, organic farming, the MMR vaccine, environmentalism, the precautionary principle and the new anti-capitalist and anti-globalisation movements, the rejection of the evidence-based approach nurtures a culture of suspicion, distrust, and cynicism, and leads to dogmatic assertion and intolerance. In this compelling and timely examination of science and society, Dick Taverne argues that science, with all the benefits it brings, is an essential part of civilised and democratic society: it offers the most hopeful future for mankind.
