Financial Management and Accounting Fundamentals for Construction

### **Cost And Management Accounting**

Proper cost accounting and financial management are essential elements of any successful construction job, and therefore make up essential skills for construction project managers and project engineers. Many textbooks on the market focus on the theoretical principles of accounting and finance required for head office staff like the chief financial officer (CFO) of a construction firm. This book's unique practical approach focuses on the activities of the construction management team, including the project manager, superintendent, project engineer, and jobsite cost engineers and cost accountants. In short, this book provides a seamless connection between cost accounting and construction project management from the construction management practitioner's perspective. Following a complete accounting cycle, from the original estimate through cost controls to financial close-out, the book makes use of one commercial construction project case study throughout. It covers key topics like financial statements, ratios, cost control, earned value, equipment depreciation, cash flow, and pay requests. But unlike other texts, this book also covers additional

financial responsibilities such as cost estimates, change orders, and project close-out. Business leaders rely on accounting data such as profit and calculated costs as a guide to whether they are making money. Should they? Accounting was designed to report financial performance not model cash flow. Accruals can disconnect cash flow from the timing and extent to which it occurs. Statements of cash flow do not provide insight into what was bought and how efficiently it was used. Costs and profits are not absolute, they change based on the model you use to calculate them. To manage cash, you must

manage what you buy and how effectively you use it. The largest expenditure for most companies is capacity; space, labor, materials, equipment, and technology. Unless you model and manage capacity effectively, you will not achieve the cash flow results you seek. This book introduces capacity management, describes cash flow dynamics, and offers ideas about how to manage both. After reading it, you be able to see, understand, and manage cash flow as never before.

managerial planning, control, and decision-making. Our goal is to help students (future managers) understand how cost accounting information adds value to an organization in a highly competitive business environment. The philosophy underlying the development of this book is that providing cost accounting information is primarily a logical process, rather than a procedural one. It is most important that students first understand the basic concepts and objectives, and then gain some experience in applying these concepts in different environments. Through this approach, students will be better equipped to deal with the unforeseen situations they will encounter in professional practice or on professional examinations. This philosophy is evident in each chapter, as basic concepts are presented and then illustrated with examples and a wide variety of homework problems. This text is intended for use in undergraduate and graduate courses in cost accounting at both the basic and advanced levels. It provides a complete and concise coverage of topics commonly included in a basic course, with an in-depth coverage of selected topics more appropriate for an advanced course in cost accounting. Modular coverage of these topics permits the instructor to adapt the text to his or her own preferences for course content. Plus, an extremely clear writing style contributes to the ease with which students will comprehend the contents of each chapter. By emphasizing the differing uses for cost accounting information, our intent is to make the student an intelligent provider, user, and interpreter of this information.

2. Analysis of ABC/ABM literature in Polish journals in the dimension of: volume, authorship, research method, focus, and content (chapter 3);
3. Analysis of ABC implementation through questionnaire research on the sample of 495 companies (chapter 4);
4. Examination of activity-based costing implementation process, structure and use through a questionnaire of 33 ABC users and 4 case studies (chapter 4 and 5);
5. Analysis of the satisfaction and benefits ensuing from ABC through a survey of 28 ABC users, particularly analysis of the attitudes of preparers and users, and also the quality of ABC information (chapter 6).

Additionally, the book presents a comparative analysis of the research [survey and case studies, including action research] with similar research conducted both in Poland and in the world.

The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality – facts, possibilities, values and communication – must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and methods for understanding, analysing and managing the actors' reality

The theory and practice of management accounting should be seen within the context of varieties of global capitalism, to appreciate its role as a 'calculative technology of capitalism' which is practiced on factory floors, corporate boards, computer networks, spreadsheets, and so forth. This new textbook is the first to introduce the field from a rounded social science perspective. Strategizing Management Accounting offers a theoretical discussion on management accounting's strategic orientation by accommodating two interrelated lines of analyses, from historical and contemporary perspectives.
