Phlebotomy: A Competency Based Approach

Medical Terminology: An Accelerated Approach approaches medical terminology not as words to be memorized but as a language to be learned and teaches students to break down words into their composite word parts. Instead of a dictionary full of terms that need to be memorized, a student equipped with groups of roots, prefixes, and suffixes can easily understand a vast amount of medical terminology regardless of how long or short their med term course is. Medical Terminology: An Accelerated Approach bridges the gap between the two fields that make up medical terminology—medicine and second-language acquisition. It provided assistance in language skills to equip health care professionals to use and

understand medical terminology and gives them real-world examples that make their knowledge applicable to working in the world of health care.

Medical Terminology Complete!

Most medical terminology texts present the roots on one page, body system on one page, and a list of related anatomical terms on the next. The result is students fail to make connections and end up approaching the course as a never-ending series of lists to be memorized. Acquiring Medical Language is language focused. It introduces students to roots with illustrations of body systems and surrounds that information with term blocks that include specific word roots, examples containing that root, and some interesting facts to make the information more memorable. This exposes students to all the relevant information (the root, its meaning, its use), so they see how it relates to the other roots in the context of the body system. Each chapter of AML also is structured around the S.O.A.P framework. S.O.A.P stands for the four general parts of a medical note: Subjective, Objective, Assessment and Plan. After introducing the student to the important roots and the medical terms relevant to the body system, the roots are presented using the SOAP note as an organizational framework. Terms are presented to students under the following learning objectives: S - Subjective - Patient History, Problems, Complaints O - Objective - Observation and Discovery A - Assessment - Diagnosis and Pathology P - Plan - Treatments and Therapies Most medical terminology texts present the roots on one page, body system on one page, and a list of related anatomical terms on the next. The result is students fail to make connections and end up approaching the course as a never-ending series of lists to be memorized.
