Fundamentals of Electrical Engineering

Around 28,000 full-time and 87,000 part-time students who started first-degree courses in 2004-05 were no longer in higher education a year later. There has been little improvement in student retention since 2001-02, though participation in higher education has increased from around 40 per cent to nearly 43 per cent of 18-30 year olds. Universities have received around £800 million over the last five years to help improve retention and participation. In 2001-02 the Committee concluded (HC 588, ISBN 9780215005496) that there was a need for improvement in several areas: reducing the wide variation in retention rates; funding to support students from low-income backgrounds; tackling skills gaps; supporting disabled students; better information. The Committee's findings in this report include: there has been no reduction in the variation in retention rates; by widening participation in higher education, higher education institutions need to understand the needs of their changing student populations through the use

of market research techniques; the Higher Education Funding Council for England should agree clear expectations for planned improvements in retention of students and make it part of any improvement plans; that only about half of part-time students obtain a qualification within six years and there is no specific framework to encourage improvement; that some students feel that academic and pastoral support is limited and does not meet their needs; information on why students withdraw from their courses is not reliable; substantial variations exist between universities in the proportions of students with disabilities that receive the Disabled Student's Allowances.

Divided into four parts: circuits, electronics, digital systems, and electromagnetics, this text provides an understanding of the fundamental principles on which modern electrical engineering is based. It is suitable for a variety of electrical engineering courses, and can also be used as a text for an introduction to electrical engineering.
