The New York Times bestselling author of Beautiful Lies and Fragile returns to The Hollows, delivering a thriller that explores matters of faith, memory, and sacrifice. After giving up his post at the Hollows Police Department, Jones Cooper is at loose ends. He is having trouble facing a horrible event from his past and finding a second act. He's in therapy. Then, on a brisk October morning, he has a visitor. Eloise Montgomery, the psychic who plays a key role in Fragile, comes to him with predictions about his future, some of them dire. Michael Holt, a young man who grew up in The Hollows, has returned looking for answers about his mother, who went missing many years earlier. He has hired local PI Ray Muldune and psychic Eloise Montgomery to help him solve the mystery that has haunted him. What he finds might be his undoing. Fifteen-year-old Willow Graves is exiled to The Hollows from Manhattan when six months earlier she moved to the quiet town with her novelist mother after a bitter divorce. Willow is acting out, spending time with kids that bring out the worst in her. And when things get hard, she has a tendency to run away—a predilection that might lead her to dark places. Set in The Hollows, the backdrop for Fragile, this is the riveting story of lives set on a collision course with devastating consequences. The result is Lisa Unger's most compelling fiction to date.

This FM deals with Army terminal operations in a TO. It contains procedures and techniques to plan, use, and control Army water, motor, rail, and air terminal operations. It explains the transportation doctrine and organizational structures needed to deploy Army terminal operations in a TO. It covers roles, missions, and concepts of employment for terminal operation units. This manual is mainly for unit commanders, key personnel, higher HQ staffs, theater planners, and commanders of operational allied units. Terminals are key nodes in the total distribution system that support the commander's concept of operation at all levels of war and through the range of military operations. They provide loading, unloading, and handling of cargo and personnel between various transportation modes. When linked by modes of transport, they define the transportation structure for the operation. Force projection missions require early identification and establishment of terminals. A well-conceived plan assures that terminals can support the deployment, reception, and onward movement of the force and its sustainment. Crucial to the execution of the operation is the assignment of the right personnel, cargo, and material handling equipment at each terminal. ITV of material moving through the transportation system also provides the

CINC with information pertaining to location and final destination of all cargo. The Army is required to function across a range of operation from peacetime through conflict to war (see FM 100-5). Terminal operators must be able to operate in every TO. Terminals will be vulnerable to air and missile attacks, especially if US and allied forces have not established air superiority and sea control. They may also be subject to attacks by unconventional forces and to sabotage, terrorism, mining, espionage, and chemical or biological attacks. Whatever the level of the Army operation, terminals will remain a critical piece to ensure continuous movement of personnel and cargo.

Most of us know bits and pieces of our history but would like to be more sure of how it all fits together. The trick is to find a history that is so absorbing you will want to read it from beginning to end. With this book, Desmond Morton, one of Canada's most noted and highly respected historians, shows how the choices we can make at the dawn of the 21st century have been shaped by history. Morton is keenly aware of the links connecting our present, our past, and our future, and in one compact and engrossing volume he pulls off the remarkable feat of bringing it all together – from the First Nations before the arrival of the Europeans to the failure of the Charlottetown accord and Jean Chretien's third term as prime minister. His acute observations on the Diefenbaker era, the effects of the post-war influx of immigrants, the flag debate, the baby boom, the Trudeau years and the constitutional crisis, the Quebec referendum, and the rise of the Canadian Alliance all provide an invaluable background to understanding the way Canada works today.

Happily ever after doesn't always start with "first comes love." Gabriel Maguire thought he'd buried his past until the night he met Holly, only to lose the woman he cared about, again. Holly Jacobs has always put the cart before the horse. A prodigy who shot to stardom in textile design, she never knew a normal life-and there's nothing she longs for more than to be normal. Pregnant before she even knows the name of her baby's father, Holly has put the cart miles ahead of the horse this time. But when she and Gabe meet for the second time, they decide to have their baby together. Holly finally begins to accept her unique way of doing everything backward, but Gabe's very normality drives her up the walls. Then his tragic past rears up; pain and loss threaten to destroy forever the fragile bond that has blossomed between him and Holly. Sometimes the only way to get where you need to be is to put the cart before the horse.

The transformation of the Army into a strategically responsive, expeditionary force that is dominant across the full spectrum of operations requires significant cultural, doctrinal and organizational change as well as advanced technological solutions. Such changes and technology must support the Army at every point on the spectrum of operations and must be suitable for the current as well as future forces. These changes and technologies must offer far-reaching capabilities that enable the Capstone Concept for Joint Operations (CCJO) and the Army's Future Force Capstone Concept. Simply improving existing platforms, doctrine, organizations and Army culture does not support the transformation envisioned in either of the aforementioned conceptual documents. Achieving this robust water transport capability requires new ways and means - enabled by truly transformational doctrine, organizations, training, materiel, leadership and education, personnel and facilities (DOTMLPF) and policy. The major shift in Army watercraft operation focuses on our ability to rapidly project and sustain operational forces within and through the littoral areas of the world. Expeditionary units and enabling technologies provide the commander the water transport capability to achieve positional advantage over operational and tactical distances. These water transport assets are not limited to operating in major or minor ports, but can also operate in austere port environments or over bare beaches. To maximize effectiveness, combat forces must be able to move autonomously, plan and rehearse while en route, and arrive in an immediately employable configuration. Transformation also emphasizes an improved link between operations and logistics, resulting in precise, reliable distributed support and sustainment to the warfighter. Future watercraft, and the units that employ them, must be fast, efficient, and agile; able to move with precision in a quickly changing environment. They must be capable of moving intact current and future force units forward of the strategic port; delivering platforms laden with retail supply; or delivering humanitarian and disaster relief materiel, all the while staying fully aware of the current and future operational situation. Army water transport forces provide the combatant commanders the maneuver capability to rapidly move forces, support and sustainment to the right place, at the right time, and in the right quantities. As the Army transforms, potential adversaries will adopt anti-access strategies. State or non-

state forces will rely on anti-access measures to delay or counter the application of U.S. military capabilities. Future adversaries will marshal their limited assets and focus them on the most likely points of entry into the region. Traditionally, these are major air and seaports or major geographical choke points that must be navigated to achieve entry. Joint Force enabling concepts, units and technologies must provide the operational commander lift assets that bypass these known points, diminishing any asymmetrical advantage held by an adversary. They must allow the commander to pick the time and place of their choosing to initiate action and, thereby, to seize and hold the initiative in a tactical environment. Army watercraft and Army soldier-mariners must be fully trained, equipped and capable of operating in this dynamic joint environment.

Religious Ministry Team Handbook

Successful commanders have discovered that effective use of their Religious Ministry Teams (RMTs) has a positive impact on readiness, moral, and family support issues. They also understand that an effective Command Religious Program (CRP) and the spiritual care that chaplains provide are irreplaceable on the battlefield. Marine Corps Reference Publication (MCRP) 6-12C, The Commander's Handbook for Religious Ministry Support, is a commonsense guide designed for field grade commanders to help facilitate their CRP and to empower their chaplains and RMTs. As a part of the Marine Corps Religious Ministry family of publications, it summarizes information contained in Marine Corps Warfighting Publication (MCWP) 6-12, Religious Ministry Support in the U.S. Marine Corps, which is crucial for commanders to become leaders in their CRP.

The Navy Electricity and Electronics Training Series (NEETS) was developed for use by personnel in many electrical and electronic-related Navy ratings. Written by, and with the advice of, senior technicians in these ratings, this series provides beginners with fundamental electrical and electronic concepts through self-study. The presentation of this series is not oriented to any specific rating structure, but is divided into modules containing related information organized into traditional paths of instruction. The series is designed to give small amounts of information that can be easily digested before advancing further into the more complex material. For a student just becoming acquainted with electricity or electronics, it is highly recommended that the modules be studied in their suggested sequence.
