Finally, a Photoshop book that is written expressly for professional photographers and hi-end serious amateurs that doesn't talk about F-stops, exposures, and how to frame a shot (you know all that stuff already--if you don't I hate to say it, but this isn't for you). This new book, from Photoshop User magazine editor and bestselling author Scott Kelby, starts at the moment your digital camera photos come into Photoshop, and he shows you the Photoshop pro techniques for managing, correcting, retouching and outputting your photos to knock your client's socks off, and turn you into a Photoshop production wizard. This book is absolutely ideal for traditional photographers who are making the jump to digital photography, and Scott's casual, step-by-step, plain-English style makes even the most complex Photoshop techniques seem so easy and accessible. entire book is graphically rich, in full color cover-to-cover, and best of all it's packed with real-world project-based tutorials that will take you through the process of sizing your images with the proper resolution (and the secret to doing so without losing image quality), how to deal with High ISO noise, blue channel noise, and other common plagues introduced by digital cameras; you'll learn how the pros color correct their photos for output on everything from inkjet printers to printing presses, and the secrets to getting perfect fleshtones no matter where it's output. You'll learn the sharpening techniques today's top digital photographers use, and how the leading retoucher's perform "digital plastic surgery" in Photoshop, plus professional facial retouching techniques using Photoshop 7.0's amazing new tools. Plus, you'll also learn how to manage your photos, "digital dodging and burning" tricks, dealing with common problems, making client presentations within Photoshop and on the Web, and the inside tips on how to work faster and more efficiently than you ever thought possible. This book is a collection of papers on spatial statistics for remote sensing. The book emerges from a study day that was organized in 1996 at the International

Institute for Aerospace Survey and Earth Sciences, ITC, in Enschede, The Netherlands. It was by several means a memorable event. The beautiful new building, according to a design by the famous modern Dutch architect Max van Huet was just opened, and this workshop was the first to take place there. Of course, much went wrong during the workshop, in particular as the newest electronic equipment regularly failed. But the workshop attracted more than hundred attendants, and was generally well received. The results of the workshop have been published in Stein et al. (1998). The aim of the workshop was to address issues of spatial statistics for remote sensing. The ITC has a long history on collecting and analyzing satellite and other remote sensing data, but its involvement into spatial statistics is of a more recent date. Uncertainties in remote sensing images and the large amounts of data in many spectral bands are now considered to be of such an impact that it requires a separate approach from a statistical point of view. To quote from the justification of the study day, we read: Modern communication means such as remote sensing require an advanced use of collected data. Satellites collect data with different resolution on different spectral bands.

Mind-opening writing on what kids need from school, from one of education's most outspoken voices. Almost no writer on schools asks us to question our fundamental assumptions about education and motivation as boldly as Alfie Kohn. The Washington Post says that "teachers and parents who encounter Kohn and his thoughts come away transfixed, ready to change their schools." And Time magazine has called him "perhaps the country's most outspoken critic of education's fixation on grades [and] test scores." Here is challenging and entertaining writing on where we should go in American education, in Alfie Kohn's unmistakable voice. He argues in the title essay with those who think that high standards mean joylessness in the classroom. He reflects thoughtfully on the question "Why Self-Discipline Is Overrated." And in an essay for the New York Times, which generated enormous response, he warns against the dangers of both punishing and praising children for what they do instead of parenting "unconditionally." Whether he's talking about school policy or the psychology of motivation, Kohn gives us wonderfully provocative—and utterly serious—food for thought. This new book will be greeted with enthusiasm by his many readers, and by teachers and parents seeking a refreshing perspective on today's debates about kids and schools.

Set in contemporary Israel, *The Immortal Bartfuss* is perhaps the most profound and powerful portrait of a Holocaust survivor ever drawn. Using the techniques

of omission and indirection perfected in such masterpieces as *Badenheim 1939* and *To the Land of the Cattails*, Appelfeld tells the story of Bartfuss, enigmatically "the immortal" because of his experience in the camps. Now locked in a hopeless marriage, Bartfuss struggles to suppress the emotions and recollections he fears and despises, while trying to keep alive the poise, dignity, and compassion essential to a human being. *The Immortal* Bartfuss is an overwhelming and unforgettable study of a man reduced to his tragic limits.

After her encounter with Leo Meyer, she knows that the first thing she wants to explore is the lifestyle he exposed her to during their brief time together. She's been promised her new Dom will be an excellent fit, but she can't imagine anyone could fill the hole left by Leo. Until she sees Master Wolf. After a devastating injury forced his retirement from the Navy SEALs, Wolf has been restless and lost. Developing new regulation of existing genes is a major source of evolutionary novelty. In this thesis, I examine evolution of transcriptional regulation by dissecting a combinatorial regulatory circuit that governs mating-type in the ascomycete branch of the fungal lineage. I first determine the means by which four conserved transcription factors regulate mating-type in the pathogenic yeast *C. albicans*. I then closely compare the *C. albicans* circuit to that of *S. cerevisiae*, identifying several classes of changes that have arisen since their divergence from a common ancestor. Among the many changes identified, I focus on a group of orthologs, the *a*-specific genes, that is positively regulated in *C. albicans*, but is negatively regulated in *S. cerevisiae*. I demonstrate that positive regulation represents the ancestral form, and that the *S. cerevisiae* mode of negative regulation is a recently derived innovation. By examining the regulation of *asgs* in a group of 16 modern yeasts that diverged at successively later times from a common ancestor, I deduce specific, sequential changes in both cis- and trans-regulatory elements that constitute the transition from positive to negative regulation.
