Photographer's Guide to the Nikon Coolpix P610

This is the first extensive scholarly study of drone metal music and its religious associations, drawing on five years of ethnographic participant observation from more than 300 performances and 74 interviews, plus surveys, analyses of sound recordings, artwork, and extensive online discourse about music. Owen Coggins shows that while many drone metal listeners identify as non-religious, their ways of engaging with and talking about drone metal are richly informed by mysticism, ritual and religion. He explores why language relating to mysticism and spiritual experience is so prevalent in drone metal culture and in discussion of musical experiences and practices of the genre. The author develops the work of Michel de Certeau to provide an empirically grounded theory of mysticism in popular culture. He argues that the marginality of the genre culture, together with the extremely abstract sound produces a focus on the listeners' engagement with sound, and that this in turn creates a space for the open-ended exploration of religiosity in extreme states of bodily consciousness.

With a strong focus on problem solving and community-police partnerships, Miller, Hess, and Orthmann's comprehensive text provides a practical, up-to-date guide to effective community policing. After introducing the history and philosophy of the movement that has profoundly shaped modern police operations, the authors emphasize practical strategies and essential skills to help readers apply effective, real-world problem solving within their communities. In light of high-profile deadly force incidents that have strained the relationships between the community and the police, this edition taps into the recommendations in the Final Report of the President's Task Force on 21st Century Policing and its call for a renewed emphasis on community policing to strengthen public trust and build police legitimacy. And the MindTap that accompanies the text helps students master techniques and key concepts while engaging them with career-based decision-making scenarios, visual summaries, and more. Science in History

J. D. Bernal's monumental work, *Science in History*, was the first full attempt to analyse the reciprocal relations of science and society throughout history, from the perfection of the flint hand-axe to the hydrogen bomb. In this remarkable study he illustrates the impetus given to (and the limitations placed upon) discovery and invention by pastoral, agricultural, feudal, capitalist, and socialist systems, and conversely the ways in which science has altered economic, social, and political beliefs and practices. In this first volume Bernal discusses the nature and method of science before describing its emergence in the Stone Age, its full formation by the Greeks and its continuing growth (probably influenced from China) under Christendom and Islam in the Middle Ages. Andrew Brown, Bernal's biographer, with a nice sense of paradox, has said of him, he 'was steeped in history, in part because he was always thinking about the future.' He goes on to say, 'Science in History is an encyclopaedic, yet individual and colourful account of the emergence of science from pre-historic times. There is detailed coverage of the scientific revolution of the Enlightenment, the Industrial Age and the first two-thirds of the twentieth century. . . The writing flows and is devoid of the tortured idioms that mar so many academic histories of science. After reading it, it is easy to agree with C. P. Snow's orotund observation that Bernal was the last man to know science. Faber Finds are reissuing the illustrated four volume edition first published by Penguin in 1969. The four volumes are: Volume 1: The Emergence of Science, Volume 2: The Scientific and Industrial Revolutions, Volume 3: The Natural Sciences in Our Time, Volume 4: The Social Sciences: Conclusion. 'This stupendous work . . . is a magnificent synoptic view of the rise of science and its impact on society which leaves the reader awe-struck by Professor Bernal's encyclopaedic knowledge and historical sweep.' Policing America is an introductory textbook to policing in the United States. In a balanced approach, the text presents the theoretical foundations of American policing, with a focus on contemporary police practices and research. Oliver covers all of the key topics in policing, but does not overburden the student with either extraneous material only loosely related to policing or the overly detailed presentation of research more suited to a graduate program. In an engaging and readable style, the author offers an overview of past practices and research in policing, but emphasizes more contemporary policing practices and research. The focus of the book is on a contextual understanding of concepts in American policing. It is supported by the academic research, balanced with the voice of the American police officer. Features: Balanced approach that emphasizes contemporary policing. Written by an academic with police experience, resulting in an approach that combines the theoretical and the practical aspects of police work. Uses hypotheticals to bring the concepts to life for students. Student-friendly and accessible presentation incorporates graphic elements such as boxed features and charts to emphasize and summarize key points. Encourages students to think critically about the role of policing in today's society. Oliver is an experienced author of textbooks in the criminal justice and policing fields, having authored or co-authored over a dozen books.

Iran is the only Middle Eastern state to have preserved its national identity through the upheavals of Arab, Turkish and Mongol invasions. It is heir to the richest culture in the Middle East: a culture that extends far beyond the state's political boundaries. This book, first published in 1987, traces elements of continuity in Iranian society from pre-Islamic times to the turmoil of the Islamic Republic. The author discusses the persistence of religion as a dominant force in Iran's politics and society; the attraction of unorthodox doctrines such as Mazdakism, Baha'ism, and revolutionary Shi'ism; the tradition of strong, charismatic leadership; and the constant problem of ruling peoples of diverse tribal, religious and linguistic affiliations. He finds explanations for recent political changes in conditions peculiarly Iranian and examines the emerging post-revolutionary society along with some of its new institutions, including the revolutionary guards, the assembly, the neighbourhood committees, and the Friday prayer leaders.

Additionally, differences in state law, regional custom, the identity and interests of the client, and the peculiarities of the specific transaction require a lawyer to choose carefully which form to use as the basis of the transaction. For this reason, there are often included several forms for the same transaction.
