Apparel Making in Fashion Design

This practical guide explains how to take accurate measurements, introduces key tools and takes the reader from simple pattern-cutting ideas to more advanced creative methods. Step-by-step illustrations show how to create and then fit basic bodice, sleeve, skirt, dress, and trouser blocks, and how to adapt these to create patterns for original designs. New material includes advice on fitting toiles and working with stretch fabrics. There is also a fully updated chapter dedicated to digital technology.

The Dynamics of Fashion

Fashion design begins in the designer's creative mind, and drawing is the crucial next step to communicating creative ideas to others to bring those ideas to reality. Clear, expressive drawings engage and bring together people in patternmaking, production, marketing, and all other facets of the fashion business, ensuring that everyone shares the same vision that originates with the designer. Kathryn Hagen brings decades of experience teaching design students how best to translate their ideas into drawings. She opens with basic drawing skills using both hand tools and computer techniques before moving on to applying those skills to both the human figure and the specifics of various types of clothing. Throughout the book she exposes designers to myriad techniques and styles, encouraging each individual to discover what works best for him or her. Each chapter ends with practice exercises as well as visual references to review and reinforce material learned

in the chapter lessons. Videos demonstrating hands-on examples can be viewed at waveland.com/Hagen, with emphasis on distressed fabrics and novelty treatments. 84 pages of color present a wide variety of rendering techniques.

The acclaimed National Book Award winner gives us a collection of spellbinding new essays that, read together, form a jigsaw-puzzle portrait of an extraordinary man. With the publication of his best-selling *Of Wolves and Men*, and with the astonishing originality of *Arctic Dreams*, Barry Lopez established himself as that rare writer whose every book is an event, for both critics and his devoted readership. Now, in *About This Life*, he takes us on a literal and figurative journey across the terrain of autobiography, assembling essays of great wisdom and insight. Here is far-flung travel (the beauty of remote Hokkaido Island, the over-explored Galápagos, enigmatic Bonaire); a naturalist's contention (Why does our society inevitably strip political power from people with intimate knowledge of the land small-scale farmers, Native Americans, Eskimos, cowboys?); and pure adventure (a dizzying series of around-the-world journeys with air freight everything from penguins to pianos). And here, too, are seven exquisite memory pieces hauntingly lyrical yet unsentimental recollections that represent Lopez's most personal work to date, and which will be read as classics of the personal essay for years to come. In writing about nature and people from around the world, by exploring the questions of our age, and, above all, by sharing a new openness about himself, Barry Lopez gives us a book that is at once vastly erudite yet intimate: a magically written and provocative work by a major American writer at the top of his form.

An introduction to the basic principles of pattern cutting, this practical book shows students how to interpret the human form and look at clothing through the eyes of a designer rather than a consumer. As well as explaining the proportions of human anatomy, the book introduces key tools and then takes the reader from simple pattern-cutting ideas to more advanced creative methods. Finally, the book looks at the work of fashion designers who are masters of pattern cutting, such as Comme des Garçons, John Galliano, Yohji Yamamoto and Issey Miyake. With photographs of final and dissected garments, along with CAD/CAM diagrams to explain how those pieces were cut, the book will gradually build an understanding of pattern cutting, and enable students to experiment and create exciting patterns for their own designs.

Major changes have occurred in the last few years in the methods of cutting and manufacturing outerwear. Light clothing companies are now manufacturing these heavy garments because of the development of fusible interlinings and new manufacturing techniques which have resulted in the deskilling of traditional tailoring methods. Outerwear has consequently assumed much greater importance in light clothing courses and this book - the first of its kind - has been written to reflect these industrial changes. It offers a course of practical and theoretical study which is related to specific garment types and fabrics. An essential manual for students at every level. Suitable for use in CGLI, BTEC and degree courses, this uniquely comprehensive work is certain to become a standard textbook on its subject.

One of the more difficult aspects of a designer's training is learning how to create patterns that make full use of the characteristics of individual fabrics. With an ever increasing range of fabrics available to the designer, an understanding of the relationship between fabric, form and pattern shape is now probably the most important skill a designer has to acquire. This book discusses the factors that need to be taken into consideration and offers a unique and practical method for solving problems. Its approach to design and flat pattern cutting is based on the appraisal of the fabric (according to a scale of five for each of five fabric characteristics - weight, thickness, sheer, drape and stretch) and body shape. The book is lavishly illustrated and makes use of numerous practical examples.

This fourth edition of Metric Pattern Cutting for Children's Wear and Babywear remains the standard textbook but has three major improvements. First, the sections have been re-organised to reflect changes in producing and marketing children's clothes. Today's popularity of easy-fitting styles and knitted fabrics means that basic 'flat' pattern cutting is used to construct the majority of children's wear and babywear and this type of cutting is therefore emphasised in this new edition. Shaped blocks and garments, cut to fit the body form, are still included, and are placed in chapters covering some school uniform garments or more expensive fashion or formal clothes. The book now clearly separates the sections useful to student beginners (Parts One, Two and Three), and also offers more advanced or specialist sections for students who wish to pursue a career in children's wear or for designers working in the different manufacturing sectors of the trade. The second change in this fourth edition is the introduction of colour coding to the sections; this makes it easier to identify specific processes in the book and enhances the illustrations. Finally, the size charts have been revised to reflect the changes in body sizing. The clear division of the boys' and girls' measurements in the charts has been in response to the way clothes are marketed and to co-ordinate with European size charts. 'Plus' charts for heavier children have also been added.

Fashion Design Essentials

Since the first edition of Metric Pattern Cutting was published in 1975 to provide a straightforward introduction to flat pattern cutting, it has become the established textbook on the subject. The fourth edition continues to offer an introduction to the basic principles of pattern cutting, with a range of good basic blocks and examples of their application to garments. The original blocks and many of the pattern adaptations have therefore been retained. However, the great expansion of casual wear, cut in jersey or stretch fabrics, has led to the growth of 'flat cutting' with no darting to create the shape and this edition devotes a whole section to this type of cutting. The sections on computer-aided design and grading have been updated. The size charts of body measurements have been revised, reflecting the changing shape of women's bodies.
