The much-anticipated revision of the second edition of The SAGES Manual: Fundamentals of Laparoscopy, Thoracoscopy, and GI Endoscopy, has been completely restructured, reorganized, and revised. The Manual has been split into two volumes for better portability. Volume I, Basic Laparoscopy and Endoscopy covers the fundamentals and procedures performed during surgical residency. Volume I will be the first volume used by students, residents, and allied healthcare professional trainees. Material has been added to these fundamentals and procedures that will also be of interest to experienced surgeons. Volume II, Advanced Laparoscopy and Endoscopy covers more advanced procedures, generally taught during fellowship. All of the sections have been reorganized with a critical eye to the needs of the modern minimal access surgeon. Two new editors have been added. Chapters have been revised by both new authors as well as many stalwart authors from previous editions. These portable handbooks cover all of the major laparoscopic and flexible endoscopic procedures in easy-to-read format. Indications, patient preparation, operative techniques, and strategies for avoiding and managing complications are included for the complete spectrum of both “gold standard” and emerging procedures in diagnostic and therapeutic laparoscopy, thoracoscopy, and endoscopy. The scope, detail, and quality of the contributions confirm and demonstrate the SAGES commitment to surgical education. This manual is sure to find a home in the pocket, locker or briefcase of all gastrointestinal endoscopic surgeons and residents.

The long-awaited exploration of permaculture specifically for cooler Northern Hemisphere climates is finally here! Already regarded as the definitive book on the subject, The Earth Care Manual is accessible to the curious novice as much as it is essential for the knowledgeable practitioner. Permaculture started out in the 1970s as a sustainable alternative to modern agriculture, taking its inspiration from natural ecosystems. It has always placed an emphasis on gardening, but since then it has expanded to include many other aspects, from community design to energy use. It can be seen as an overall framework that puts a diversity of green ideas into perspective. Its aims are low work, high output, and genuine sustainability.

A chilling exposé of the international effort to minimize the health and environmental consequences of nuclear radiation in the wake of Chernobyl. Dear Comrades! Since the accident at the Chernobyl power plant, there has been a detailed analysis of the radioactivity of the food and territory of your population point. The results show that living and working in your village will cause no harm to adults or children. So began a pamphlet issued by the Ukrainian Ministry of Health—which, despite its optimistic beginnings, went on to warn its readers against consuming local milk, berries, or mushrooms, or going into the surrounding forest. This was only one of many misleading bureaucratic manuals that, with apparent good intentions, seriously underestimated the far-reaching consequences of the Chernobyl nuclear catastrophe. After 1991, international

organizations from the Red Cross to Greenpeace sought to help the victims, yet found themselves stymied by post-Soviet political circumstances they did not understand. International diplomats and scientists allied to the nuclear industry evaded or denied the fact of a wide-scale public health disaster caused by radiation exposure. Efforts to spin the story about Chernobyl were largely successful; the official death toll ranges between thirty-one and fifty-four people. In reality, radiation exposure from the disaster caused between 35,000 and 150,000 deaths in Ukraine alone. No major international study tallied the damage, leaving Japanese leaders to repeat many of the same mistakes after the Fukushima nuclear disaster in 2011. Drawing on a decade of archival research and on-the-ground interviews in Ukraine, Russia, and Belarus, Kate Brown unveils the full breadth of the devastation and the whitewash that followed. Her findings make clear the irreversible impact of man-made radioactivity on every living thing; and hauntingly, they force us to confront the untold legacy of decades of weapons-testing and other nuclear incidents, and the fact that we are emerging into a future for which the survival manual has yet to be written.

Philosophy manual: a South-South perspective

The descent of the Huygens probe to the frozen surface of Saturn's moon, Titan, in 2005, marks a pinnacle achievement in space exploration - the most distant planetary landing ever made or presently foreseen. The Huygens probe's seven-year voyage through space (past Venus, Earth and Jupiter) attached to the Cassini orbiter, its arrival at Saturn and three-week dormant coast to Saturn's moon, Titan, culminated in Huygens' hypersonic entry into Titan's atmosphere, 2.5-hour parachute descent, and continued operation for 72 minutes on the surface transmitting data back to Earth via the Cassini orbiter. Saturn has 62 confirmed orbiting moons, but Titan (which is larger than the planet Mercury) was chosen as it has two major components of Earth's atmosphere - nitrogen and oxygen - but the oxygen is thought to be frozen as water ice within the body of the moon. If Titan received more sunlight, its atmosphere might well resemble that of a primitive Earth. The hope is that study of the data gathered about Titan will help us to understand how the Earth evolved, and possibly what led to the evolution of life.

During his 40-year career, the author became one of the industry's most respected television editors, receiving seven Emmy nominations and winning four of the coveted awards. But it was as a master of the jump cut--an editing style in which a sudden cut from one shot to another is made without a fadeout--that he is most remembered, and the term became his nickname. Mr. Schneider worked on many of Bob Hope's shows over the years, but it was for Laugh-In that he fully developed his editing style. This is a behind-the-scenes look at the development of television, from the days when some editing was done with a razor blade and tape to the electronic editing of today. Along the way, Mr. Schneider remembers the stars he worked with, from Gene Kelly to Redd Foxx.
