The Man with the Beautiful Voice

Sandra Hockenbury and new coauthor Susan Nolans remarkable textbook is grounded in the belief that all kinds of students can develop a real understanding of psychology and lasting scientific literacy. The authors act on that belief by using relatable personal stories to communicate the concepts of psychological science (and the process of science itself), and by presenting important research in a clear not oversimplified way. Hockenbury and Nolan also take full advantage of online learning, creating activities in LaunchPad that have students thinking about psychology as scientists do. New co-author, Susan Nolan of Seton Hall University was recently designated a Master Teacher by the Society for Teaching Psychology. She regularly gives talks about incorporating scientific literacy into the introductory course and across the psychology curriculum.

The Heart's Code

For more than 30 years, numerous independent reviewers, student advice writers and even competitors have heralded HERGENHAHN'S AN INTRODUCTION TO THE HISTORY OF PSYCHOLOGY as the best in the field--and for good reason. It was the first History of Psychology text to include basic pedagogy--elements such as summaries and study questions that several current alternatives still lack. It engages students with interesting biographical tidbits--the fun facts that readers fondly remember after other details fade. Grounded in original source material and contemporary scholarship, the book provides breadth and depth of analysis unrivaled by works of similar length. In the eighth edition, author Tracy Henley continues to demonstrate that most of the concerns of contemporary psychologists are manifestations of themes that have been part of Psychology for hundreds--or even thousands--of years. Introduction to Psychology

Zen koans, beginning some 1500 years ago, refer to stories or questions arising in encounters between monks and old Chinese and Japanese masters, and include commentaries designed to help the Zen practitioner awaken. Koans like Hakuin's 'What is the sound of one hand clapping?' are well-known, and the word koan has even gone mainstream. Thousands of classic koans emerged from the lives of monks living inside a Chinese or Japanese culture, and the commentaries on those koans contain poetic elements and images that have proved challenging for many Westerners. The Book of Householder Koans is a collection of koans created by 21st century Zen practitioners living a lay life in the West. The koans deal with the challenges of relationships, raising children, work, money, love, loss, old age, and death, and come from practitioners across three continents, and with commentaries by two Western teachers. The collection is based on the premise that our lives as householders contain situations rich with challenge and grit, the equivalents of old Zen masters' shouts or blows meant to sweep the ground right from under their students. They become koans, or koan practice, when they jolt us out of our usual way of thinking, when we're no longer observers of our lives but plunge in, closing the gap between ourselves and the situation we face.

Brehm, Miller, Perlman, and Campbell illustrate the relevance of close relationship science to readers' everyday lives, encouraging thought and analysis. Classic contributions to the field are covered in addition to topics on the leading edge of research.

Batman and Philosophy

Beautifully crafted stories of psychotherapy-told for the first time from the perspective of the therapist In her long career as a psychotherapist, acclaimed author Lillian Rubin occasionally encountered patients who demanded a very special, even unorthodox, therapeutic approach. For the first time, Dr. Rubin tells the stories of her most fascinating, most challenging case, 'from the other side of the couch,' focusing not just on the patient, but on her own inner process as she confronts the issues each case raises. Each of the seven stories she tells is a moving journey into the human psyche, from the secret life of 'The Woman Who Wasn't' or the extreme regression of 'The White Hat' to the smoldering rage of 'The Man with the Beautiful Voice.' Through these captivating tales, and in a thought-provoking introduction, Dr. Rubin illuminates the process of therapy and how it works, especially when rules need to be bent or even broken. For anyone who has been in therapy, or even wondered what happens behind those tightly sealed doors, this book offers a gift of insight.

A Focus on Fractions

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. Weiten's approach is backed by a straightforward writing style, unparalleled in-text visuals and didactic art program, and in-book review to help users prioritize and retain the core concepts. Weiten surveys psychology's broad range of content with three aims: to illuminate

the process of research and its intrinsic relationship to application (themes); to show both the unity and diversity of the subject (variations), and to invite users to the study of psychology by respecting their ability to master its fundamental concepts. Weiten's themes (including empiricism, theoretical diversity, sociohistorical contexts, multifactorial causation, cultural heritage, heredity and environment, and subjectivity of experience) and variations provide unifying threads across chapters that help users see the connections among different research areas in psychology.
