Concept Development Practice Book

The production of doubled haploids has become a necessary tool in advanced plant breeding institutes and commercial companies for breeding many crop species. However, the development of new, more efficient and cheaper large scale production protocols has meant that doubled haploids are also recently being applied in less advanced breeding programmes. This Manual was prepared to stimulate the wider use of this technology for speeding and opening up new breeding possibilities for many crops including some woody tree species. Since the construction of genetic maps using molecular markers requires the development of segregating doubled haploid populations in numerous crop species, we hope that this Manual will also help molecular biologists in establishing such mapping populations. For many years, both the Food and Agriculture Organization of the United Nations (FAO) and the International Atomic Energy Agency (IAEA) have supported and coordinated research that focuses on development of more efficient doubled haploid production methods and their applications in breeding of new varieties and basic research through their Plant Breeding and Genetics Section of the Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture. The first FAO/IAEA scientific network (Coordinated Research Programme - CRP) dealing with doubled haploids was initiated by the Plant Breeding and Genetics Section in 1986.

The Photoshop Elements 2020 Book for Digital Photographers

Hey there, y'all! My favorite recipes came direct from my momma and grandmommas. I just love goin' through all the recipe cards they passed on to me and readin' their handwritten notes; it makes me remember our good times in the kitchen, gathered round the table. Sometimes, though, I need a little remindin' when it comes to writin' down my own recipes and recollections, so I've put together this darlin' little journal to get me (and you) started recordin'. I know I never forget a meal, but I also know that Jamie and Bobby aren't always listenin' to what I'm tellin' 'em. So for you and the boys, I've included some tried-and-true recipes and some of my hard-learned tricks for gettin' out of culinary scrapes -- and Lord, honey, have there been a few. Whether it is a real disaster -- the boss and his wife are comin' over and the kitchen is full of smoke (no shame in servin' some takeout) -- or just an everyday bump in the road -- your husband didn't hear the buzzer, and the cake got a little dry in the oven (let some sugar water soak into those layers, and no one will know the difference) -- I've got your answer. Just get cookin' and let loose: nothin' makes memories like the smell of home-

cooked meals. Jot down your ingredients and your musings, cut out a recipe card or two to share with friends, keep track of who came to dinner, who liked what, and who laughed the loudest; remember the good times and learn from the bad. Like I always say, there's not much in life you can't learn in the kitchen.

Yanomami raises questions central to the field of anthropology - questions concerning the practice of fieldwork, the production of knowledge, and

anthropology's intellectual and ethical vision of itself. Using the Yanomami controversy - one of anthropology's most famous and explosive imbroglios - as its starting point, this book considers how fieldwork is done, how professional credibility and integrity are maintained, and how the discipline might change to address central theoretical and methodological problems. Both the most up-to-date and thorough public discussion of the Yanomami controversy.

This volume explores the psychodynamic issues raised by different kinds of surgery, and how a patient's experience of surgery is influenced by the physical, cultural, and even mythic meanings of the body organ operated on. The chapters look at the psychological implications of, and emotional reactions to, most types of major surgery. Understanding of these issues, by the psychiatrist, the clinical psychologist, the surgeon, and nurse, can mean the difference between recovery and illness, health and chronic invalidism, and even life and death. The last chapter discusses the use of short term therapy to help the patient adjust to the trauma of surgery.

MasteringPhysics - For Conceptual Physics

Since the beginning of agricultural production, there has been a continuous effort to grow more and better quality food to feed ever increasing populations. Both improved cultural practices and improved crop plants have allowed us to divert more human resources to non-agricultural activities while still increasing agricultural production. Malthusian population predictions continue to alarm agricultural researchers, especially plant breeders, to seek new technologies that will continue to allow us to produce more and better food by fewer people on less land. Both improvement of existing cultivars and development of new high-yielding cultivars are common goals for breeders of all crops. In vitro haploid production is among the new technologies that show great promise toward the goal of increasing crop yields by making similar germplasm available for many crops that was used to implement one of the greatest plant breeding success stories of this century, i. e. , the development of hybrid maize by crosses of inbred lines. One of the main applications of anther culture has been to produce diploid homozygous pure lines in a single generation, thus saving many generations of backcrossing to reach homozygosity by traditional means or in crops where self-pollination is not possible. Because doubled haploids are equivalent to inbred lines, their value has been appreciated by plant breeders for decades. The search for natural haploids and methods to induce them has been ongoing since the beginning of the 20th century.

The Rabbit on the Face of the Moon is a collection of articles on mythology in the Mesoamerican tradition by Alfredo Lopez Austin, one of the foremost scholars of ancient Mesoamerican thought. Their span is diverse: myths and names, eclipses, stars, left and right, Mexica origins, Aztec incantations, animals, and the incorporation of Christian elements into the living mythologies of Mexico. The title essay relates the Mesoamerican myth explaining why there is a rabbit on the moon's face to a Buddhist image and suggests the importance of the profound mythical concepts presented by each image. The eighteen pieces in this volume are unified by their basis in Mesoamerican tradition and provide a fascinating look into a system of millennia-old legends and beliefs.
