Gas Dynamics

Gas Dynamics covers all the material required for mainstream introductory courses in Advanced Fluid Mechanics, and Compressible Fluid Flow. In order to ensure complete understanding of the physical behaviour of compressible fluid flow and the principles underlying modern-day industrial experience and techniques, the authors begin with basic one-dimensional steady flow and progress to introductory two-dimensional flows and unsteady flows. Applications cover aerodynamics, turbomachinery, gas turbines and common engineering designs. Each chapter begins with basic principles, provides full derivation of results, explores the theory via worked problems and exercises (answers provided in a separate solutions manual), and has been extensively class-tested.

In Structural Condition Assessment, editor-in-chief Robert T. Ratay gathers together the leading people in the field to produce the first unified resource on all aspects of structural condition assessment for strength, serviceability, restoration, adaptive reuse, code compliance, and vulnerability. Organized by the four main stages of a structural evaluation, this book provides an introduction to structural deterioration and its consequences, the business and legal aspects of conducting an evaluation, initial survey and evaluation techniques for various structures, and specific tests for five of the most common structural materials (concrete, steel, masonry, timber and fabric.)

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the

symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

This work responds to the need to find, in a sole document, the affect of oxidative stress at different levels, as well as treatment with antioxidants to revert and diminish the damage. Oxidative Stress and Chronic Degenerative Diseases - a Role for Antioxidants is written for health professionals by researchers at diverse educative institutions (Mexico, Brazil, USA, Spain, Australia, and Slovenia). I would like to underscore that of the 19 chapters, 14 are by Mexican researchers, which demonstrates the commitment of Mexican institutions to academic life and to the prevention and treatment of chronic degenerative diseases.

This book is a guide to Perl's most common Win32 extensions, grouped by their functionality. The new edition updates coverage from Perl 5.05 to current Perl version 5.6. It also includes new chapters offering critical, badly-needed information regarding security for Win32Perl, the topic most highly requested by reviewers. The appendices have descriptions and syntax of each function in the extensions covered. Each chapter makes extensive use of code segments to illustrate the use of specific functions and real world scenarios in which these functions can be used.

Buying Guide 2008 (Canadian Edition)

In this radically conservative book, the authors advocate a back-to-basics approach to marketing that replaces the

relentless quest for differentiation with a relentless focus on these types of basic customer needs. The authors' research shows that most companies have been ignoring the basics for too long. At the heart of the authors' approach is a view of why customers buy what they do. Barwise and Meehan argue that marketers must understand what customers want from the entire product or service category. So rather than focus on new luxury attributes for a specific car —marketers need to understand what basic needs customers have for automobiles in general (ie: safety, handling, etc). Once they figure that out—they need to deliver on those basic needs better than everyone else.

Around the world, more young people than ever before are attending university. Student numbers in South Africa have doubled since democracy and for many families, higher education is a route to a better future for their children. But alongside the overwhelming demand for higher education, questions about its purposes have intensified. Deliberations about the curriculum, culture and costing of public higher education abound from student activists, academics, parents, civil society and policy-makers. We know, from macro research, that South African graduates generally have good employment prospects. But little is known at a detailed level about how young people actually make use of their university experiences to craft their life courses. And even less is known about what happens to those who drop out. This accessible book brings together the rich life stories of 73 young people, six years after they began their university studies. It traces how going to university influences not only their employment options, but also nurtures the agency needed to chart their own way and to engage critically with the world around them. The book offers deep insights into the ways in which public higher education is both a private and public good, and it provides significant conclusions pertinent to anyone who works in – and cares about – universities.

Welcome to the proceedings of ICCHP 2008. We were proud to welcome participants from more than 40 countries from all continents to ICCHP. The International Programme Committee, encompassing 102 experts from all over the world, selected 150 full and 40 short papers out of 360 abstracts submitted to ICCHP. Our acceptance rate of about half of the submissions, demonstrates the scientific quality of the programme and in particular the proceedings you have in your hands. An impressive group of experts agreed to organize "Special Thematic Sessions" (STS) for ICCHP 2008. The existence of these STS sessions helped to bring the meeting into sharper focus in several key areas of assistive technology. In turn, this deeper level of focus helped to bring together the state-of-the-art and mainstream technical, social, cultural and political developments. Our keynote speaker, Jim Fruchterman from BeneTech, USA highlighted the importance of giving access to ICT and AT at a global level. In another keynote by Harold Thimbleby, Swansea University, UK, the role of user-centred design and usability engineering in assistive technology and accessibility was addressed. And finally, a combination keynote and panel discussion was reserved for WAI/WCAG2.0, which we expect to be the new reference point for Web accessibility from the summer of 2008 and beyond.

Companies in the business of providing knowledge -- for profit -- will dominate the 21st-century global marketplace. Can your business compete? In today's fast-paced world, knowledge is doubling nearly every seven years, while the life cycle of

a business grows increasingly shorter. The best way -- and perhaps the only way -- to succeed is to become a "knowledge-based" business. In *The Monster Under the Bed*, Stan Davis and Jim Botkin show how: * Every business can become a knowledge business * Every employee can become a knowledge worker * Every customer can become a lifelong learner. *The Monster Under the Bed* explains why it's necessary for businesses to educate employees and consumers. Consider the fact that the vast majority of 60 million PC owners, for example, learned to use their computers not at school but at work or at home. Davis and Botkin explain how any high-tech, low-tech, or no-tech company can discover new markets and create new sources of income by building future business on a knowledge-for-profit basis -- and how, once it does, its competitors must follow or fail. Filled with examples of high-profile companies that are riding the crest of this powerful wave, *The Monster Under the Bed* is an insightful exploration of the many ways that the knowledge-for-profit revolution will profoundly affect our businesses, our educational processes, and our everyday lives.
