Concepts of Earth and Chemistry Course Description
This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Earth Blending a creationism perspective of history with definitions of terms and identification of famous explorers, scientists, etc., this book gives students an excellent initial knowledge of people and places, encouraging them to continue their studies in-depth. Semester 2: Chemistry Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical

Forensic Nursing Science - E-Book

1. An integrated semester series for Classes 1 to 5, comprising two semester books for each class. 2. The books are mapped to the National Curriculum Framework. 3. The series focus on developing the 21st century skills of critical thinking, creativity, communication and collaboration through reading texts that are value-centric, as well as activities, exercises and projects that develop life skills along with application and analytical thinking. 4. The subjects included in Classes 1 & 2 (Semester 1 and 2) are English, Mathematics, Environmental Studies (EVS) and General Knowledge 5. The subjects included in Classes 3 to 5 (Semester 1 and 2) are English, Mathematics, Science, Social Studies and

For more than a half century, the Guide to the Evaluation of Education Experiences in the Armed Services has been the standard reference work for recognizing learning acquired in military life. Since 1942, ACE and has worked cooperatively with the US Department of Defense, the Armed Services, and the US Coast Guard in helping hundreds of thousands of

The Register of the University of Montana, Missoula, Montana

Announcement of the Graduate School

Survey of Science History & Concepts Course
Description Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline.

Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world

of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments.

Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal.

In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science

Written and edited by the most respected authorities in forensic nursing and forensic sciences, this new edition provides the tools and concepts you need to collect evidence that is admissible in court, determine the significance of that evidence, and provide accurate, reliable testimony while administering high-quality patient care. Now in full color throughout, it remains the most comprehensive, highly illustrated text of its kind. Provides a comprehensive, updated guide to forensic nursing science, paying special attention to the International Association of Forensic Nurses's (IAFN) goals for forensic nursing. Retains a focus on assessment skills and the collection and preservation of evidence, following the established guidelines of the forensic sciences. Prepares you to provide testimony as a fact witness or a forensic nursing expert. Includes an illustrated case study in almost every chapter, helping you relate the information to clinical practice. Highlights important recommendations for interventions in Best Practice boxes, including the evidence base for each. Summarizes important points in Key Point boxes, so you can quickly review the most important concepts in each chapter. Explores the evolving role of forensic nurses in today's health care facilities and the community. Edited by Virginia Lynch, founding member and first President of the International Association of Forensic Nurses and Janet Barber Duval, both well-respected pioneers and educators in the field. Contains 300 full-color illustrations integrated throughout the text, so you can view evidence quickly and easily, as it is likely to appear in practice. Presents information on courtroom testimony and depositions in one reorganized,

streamlined chapter, giving you a full, organized treatment of this extremely important topic. Includes twelve new chapters: Digital Evidence, Medical Evidence Recovery at the Death Scene, Asphyxia, Electrical and Thermal Injury, Intrafamilial Homicide and Unexplained Childhood Death, Human Trafficking, Credential Development for Forensic Nurses, Gangs and Hate Crimes, Ethics Issues in Forensic Nursing, Forensic Physics and Fracture Analysis, Sexual Deviant Behaviors and Crime and Forensic Epidemiology. Contains heavily revised information on Prehospital Evidence, Forensic Investigation in the Hospital, and Human Abuse and Deaths in Custody. Features critical thinking questions with every case study, so you can thoroughly consider the implications of each clinical scenario. Evolve site will include appendices and additional documentation materials.
