Fun for the Secret Seven

Film stocks are vanishing, but the iconic images of the silver screen remain -- albeit in new, sleeker formats. Today, viewers can instantly stream movies on televisions, computers, and smartphones. Gone are the days when films could only be seen in theaters or rented at video stores: movies are now accessible at the click of a button, and there are no reels, tapes, or discs to store. Any film or show worth keeping may be collected in the virtual cloud and accessed at will through services like Netflix, Hulu, and Amazon Instant. The movies have changed, and we are changing with them. The ways we communicate, receive information, travel, and socialize have all been revolutionized. In *Streaming*, Wheeler Winston Dixon reveals the positive and negative consequences of the transition to digital formatting and distribution, exploring the ways in which digital cinema has altered contemporary filmmaking and our culture. Many industry professionals and audience members feel that the new format fundamentally alters the art, while others laud the liberation of the moving image from the "imperfect" medium of film, asserting that it is both inevitable and desirable. Dixon argues that the change is neither good nor bad; it's simply a fact. Hollywood has embraced digital production and distribution because it is easier, faster, and cheaper, but the displacement of older technology will not come without controversy. This groundbreaking book illuminates the challenges of preserving media in the digital age and explores what stands to be lost, from the rich hues of traditional film stocks to the classic movies that are not profitable enough to offer in streaming formats. Dixon also investigates the financial challenges of the new distribution model, the incorporation of new content such as webisodes, and the issue of ownership in an age when companies have the power to pull purchased items from consumer devices at their own discretion. *Streaming* touches on every aspect of the shift to digital production and distribution. It explains not only how the new technology is affecting movies, music, books, and games, but also how instant access is permanently changing the habits of viewers and influencing our culture.

Digital Broadcasting presents an introduction to how the classic notion of 'broadcasting' has evolved and is being reinterpreted in an age of digitization and convergence. The book argues that 'digital broadcasting' is not a contradiction in terms, but-on the contrary-both terms presuppose and need each other. Drawing upon an interdisciplinary and international field of research and theory, it looks at current developments in television and radio broadcasting on the level of regulation and policy, industries and economics, production and content, and audience and consumption practices.

How the Internet of Things will change your life: all you need to know, in plain English! The Internet of Things (IoT) won't just connect people: It will connect "smart" homes, appliances, cars, offices, factories, cities... the world. You need to know what's coming: It might just transform your life. Now, the world's #1 author of beginning technology books has written the perfect introduction to IoT for everyone. Michael Miller shows how connected smart devices will help people do more, do it smarter, do it faster. He also reveals the potential risks—to your privacy, your freedom, and maybe your life. Make no mistake: IoT is coming quickly. Miller explains why you care, helps you use what's already here, and prepares you for the world that's hurtling toward you. --What is IoT? How does it work? How will it affect me? --What's realistic, and what's just hype? --How smart is my "smart TV" really? (And, is it watching me?) --Can smart IoT devices make me healthier? --Will smart appliances ever be useful? --How much energy could I save with a smart home? --What's the future of wearable tech? --When will I have a self-driving car? --When will I have a nearly self-driving car? (Hint: Surprisingly soon.) --Is IoT already changing the way I shop? --What's the future of drones, at war and in my neighborhood? --Could smart cities lower my taxes? --Who gets the data my devices are collecting? --How can I profit from the Internet of Things? --What happens when the whole world is connected? --Will I have any privacy left at all?
