Smart Hiring for Your Business

Provable Security

Shows leaders in the middle just how powerful they are without pretending that leading employees and reporting to bosses don't require different skills. It fills the gap between the books those leaders read and the information they actually need and answers the big questions that constantly confound leaders and their companies: Why do leaders who care about their teams still struggle to gain their boss's approval? Why do those same leaders who feel they serve their teams have so much difficulty getting teams to step it up and go beyond the basic requirements of their jobs? Why do leaders have issues getting other divisions in the organization to do more, so that their teams don't have to do more than their share? The answer: Leaders in the middle too often serve down to their people and defend up to their bosses, instead of serving up to their bosses and coaching down to their employees. This is why so many companies struggle to innovate and get stuck—leaving everyone frustrated and looking for answers. *Serve Up, Coach Down* changes all that. Great leaders don't feed their people fish; they coach them on how to fish for themselves and then beat the competition by catching more fish. Those people in return serve their leaders and the people those leaders report to by delivering maximum performance for the organization. Achieving that performance, however, requires leaders in the middle to focus, have confidence, and commit to changing their mindsets.

Business Week

Examining post-1990s Indie cinema alongside more mainstream films, Brereton explores the emergence of smart independent sensibility and how films break the classic linear narratives that have defined Hollywood and its alternative 'art' cinema. The work explores how bonus features on contemporary smart films speak to new generational audiences.

Growing Smart

Smart Business is the definitive primer for understanding why companies behave as they do, what the basics of sound business practice are and where the stakeholders fit in. There are a handful of fairly simple but key drivers behind the way businesses operate and James Leibert explains them. Smart Business will enable readers to fast track their business skills. Smart books are essential primers to the key issues facing business people. They are practical and action-oriented, providing instant knowledge for ambitious and hungry professionals who want to make a lasting impression throughout their career. Smart books are designed to give killer approaches to key business subjects, and deliver sound principles in a style that is both informative and has attitude. They are the perfect resource for time-starved, information-hungry business people everywhere!

Leading Smart Transformation

Smart Business

The emerging widespread use of artificial intelligence in education. Multimedia, simulation, computer-mediated communication networks, and distance learning have all become part of the educational toolkit. The next major technology to change the face of education will be based on the widespread use of artificial intelligence (AI). Progress in AI has led to a deeper understanding of how to represent knowledge, to reason, and to describe procedural knowledge. Progress in cognitive science has led to a deeper understanding of how people think, solve problems, and learn. AI scientists use results from cognitive science to create software with more humanlike abilities, which can help students learn better. This book looks at some of the results of this synergy among AI, cognitive science, and education. Examples include virtual students whose misconceptions force students to reflect on their own knowledge, intelligent tutoring systems, and speech recognition technology that helps students learn to read. Some of the systems described are already used in classrooms and have been evaluated; a few are still laboratory efforts. The book also addresses cultural and political issues involved in the deployment of new educational technologies.

Hackers, cyber-criminals, Dark Web users, and techno-terrorists beware! This book should make you think twice about attempting to do your dirty work in the smart cities of tomorrow. Scores of cities around the world have begun planning what are known as “smart cities.” These new or revamped urban areas use the latest

technology to make the lives of residents easier and more enjoyable. They will have automated infrastructures such as the Internet of Things, “the Cloud,” automated industrial controls, electronic money, mobile and communication satellite systems, wireless texting and networking. With all of these benefits come new forms of danger, and so these cities will need many safeguards to prevent cyber criminals from wreaking havoc. This book explains the advantages of smart cities and how to design and operate one. Based on the practical experience of the authors in projects in the U.S. and overseas in Dubai, Malaysia, Brazil and India, it tells how such a city is planned and analyzes vital security concerns that must be addressed along the way. Most of us will eventually live in smart cities. What are the advantages and the latest design strategies for such ventures? What are the potential drawbacks? How will they change the lives of everyday citizens? This book offers a preview of our future and how you can help prepare yourself for the changes to come.

The Spear Temples Key: Vol. I is a book of symbols and figurative speech, just like the Bible. It seeks to explain mysteries that are both ancient and new. Revelation did not stop in the first century, it was withheld so the moon and the stars could get in their places. The revelations within this book are for the noble of heart, those whose hearts are in heaven. A smile goes a long way, let your face shine with oil. Be of good cheer, the day of the Lord is at hand. Keep this book close, it will guide you to a new spring.

The Smart Woman's Guide to Networking

During his life, Bradbury has created more than eight hundred different literary works, including several novels and novels, hundreds of short stories, dozens of plays, a number of articles, notes and poems. Bradbury has traditionally been considered a classic of science fiction, although much of his work tends toward fantasy genre, parables or fairy tales. 100 Smart Choices

Go-West

We are living at the dawn of what has been termed ‘the fourth paradigm of science,’ a scientific revolution that is marked by both the emergence of big data science and analytics, and by the increasing adoption of the underlying technologies in scientific and scholarly research practices. Everything about science development or knowledge production is fundamentally changing thanks to the ever-increasing deluge of data. This is the primary fuel of the new age, which powerful computational processes or analytics algorithms are using to generate valuable knowledge for enhanced decision-making, and deep insights pertaining to a wide variety of practical uses and applications. This book addresses the complex interplay of the scientific, technological, and social dimensions of the city, and what it entails in terms of the systemic implications for smart sustainable urbanism. In concrete terms, it explores the interdisciplinary and transdisciplinary field of smart sustainable urbanism and the unprecedented paradigmatic shifts and practical advances it is undergoing in light of big data science and analytics. This new era of science and technology embodies an unprecedentedly transformative and constitutive power—manifested not only in the form of revolutionizing science and transforming knowledge, but also in advancing social practices, producing new discourses, catalyzing major shifts, and fostering societal transitions. Of particular relevance, it is instigating a massive change in the way both smart cities and sustainable cities are studied and understood, and in how they are planned,

designed, operated, managed, and governed in the face of urbanization. This relates to what has been dubbed data-driven smart sustainable urbanism, an emerging approach based on a computational understanding of city systems and processes that reduces urban life to logical and algorithmic rules and procedures, while also harnessing urban big data to provide a more holistic and integrated view or synoptic intelligence of the city. This is increasingly being directed towards improving, advancing, and maintaining the contribution of both sustainable cities and smart cities to the goals of sustainable development. This timely and multifaceted book is aimed at a broad readership. As such, it will appeal to urban scientists, data scientists, urbanists, planners, engineers, designers, policymakers, philosophers of science, and futurists, as well as all readers interested in an overview of the pivotal role of big data science and analytics in advancing every academic discipline and social practice concerned with data-intensive science and its application, particularly in relation to sustainability.

Smart Investments

In the turbulence of recent times, how we run corporations has been examined from every angle. Corporations have proved adept at change; governments have stuck to established rules. The challenge is to put in place machinery to provide services in a way that resists the growth of bureaucracy. The need for SMART government could not be starker.

InfoWorld

100 Smart Choices from OptumHealth provides information on a broad range of adult preventative health and wellness topics including nutrition, exercise, stress management, community, doctor-patient relationships, positive health changes, and safety. Part 1 focuses on overall wellness - eating well, staying active, and reducing stress - highlighting small changes that can make a big difference in a person's health. Part 2 offers clear direction for the 34 common symptom moments to promote the most appropriate and cost-effective care. Part 3 helps the consumer take charge of their health by providing tools and trackers to help readers track medical history, plan preventative care, and log activity and nutrition.
