Often management is the art of making strategic and tactical decisions with a total lack of objective information. How often do we wish for a crystal ball that would let us see how decisions today will play out in the future? Unfortunately it is not yet possible to predict the future, but it is possible to generate objective criteria to help make today's decisions. While simulation has been around for decades, recent advances have made it much more accessible and useful in our daily world. The software is now less expensive and easier to learn and use. And the flexibility and

accuracy have dramatically improved. But most important, modern tools allow you to solve problems much faster than ever before – making those solutions timelier and less costly, and letting you reap the benefits quickly. We invite you to learn about simulation and its potential to improve your business. Then perhaps use this book as a companion to the free software download to start building models on your first day. After completing this introduction, you can continue your learning by taking advantage of the free video training available on the Simio web site or via the Support ribbon on the downloaded software.
