First Year Lathe Work - Scholar's Choice Edition

Text Book of Turning

Introducing a new publication for the South Bend Lathe enthusiast from ILION Industrial Services: A Guide to Renovating the South Bend Lathe for Models 10L and 10R (known as the Heavy 10), 13" 14.5" and 16". The manual is a bound 8.5" x 11" soft cover, 156 pages in length and is fully illustrated with over 450 B&W photographs plus step-by-step instructions for refurbishing your lathe. As you will notice, this is NOT a fuzzy Xerox reprint of an existing manual. Our book was painstakingly produced over the last two years specifically with the South Bend Lathe owner in mind and it addresses the most commonly asked questions and methods for how to renovate a used lathe. Even though South Bend ceased production of these fine quality lathes years ago, there are still thousands of servicable lathes sitting out there in home shops, small businesses, schools and machinery dealers. Our book takes the guess work out of what to do if you find one and decide to purchase. The details include the sequence for disassembling, cleaning, reassembling and adjusting the critical components of the heavy 10, 13", 14 1/2" and 16" industrial lathes. The basic design of the industrial series of lathes was essentially the same except for the scale so the 10L and 13" lathes are primarily used for demonstration purposes in the manual but all steps will apply directly to the 14.5" and 16" lathes as well. The manual has specific chapters dedicated to both the single tumbler and double tumbler style of gearbox. Additional information is included for evaluating and purchasing a used SBL if you

are not lucky enough to already own one. There is a section on refinishing industrial machinery plus a guide on how to handle special fasteners like taper pins. The typeface of the manual is printed two points larger than normal for those of us who prefer to work at the bench without reading glasses. The instructions are very straight forward and no prior machinery renovation experience is required. The manual also includes a list of resources for vintage SBL owners as well as parts references, tool requirements, lubrication guides and material specifications. If you have a Southbend lathe, don't miss your chance to pick up this complete guide for your machine at a very reasonable price.

Perfect for any home machinist with a new lathe, this comprehensive guide is designed to expand your enjoyment of this versatile machine and take full advantage of its extensive capabilities. Profusely illustrated with hundreds of clear photographs and concise diagrams, it provides in-depth coverage of all aspects of tooling and machining operations.

The Metal Shaper

Build your own Metal Shaper. Exotic is a mild adjective when applied to this shaper. It will cut splines, keyways, gears, sprockets, dovetail slides, flat and angular surfaces and irregular profiles. And all of these with a simple hand-ground lathe tool bit. Obsolete in modern industry, of course, because milling machines do the work much faster and cheaper. But you can't beat a shaper for simplicity and economy in the home shop. The shaper has a 6" stroke and a mean capacity of 5" x 5", variable and adjustable stroke length, automatic variable cross feed and graduated collars. You will be proud to add this machine to your shop.

If you are thinking about cleaning up that old South Bend Lathe that was given to you by your grandfather and has been sitting in your garage, this manual is what you will need to get the job done. " A Guide to Renovating the South Bend Lathe 9" Model A, B & C and Model 10k " is our brand new soft cover, 106 page shop manual which is fully illustrated with over 300 B&W photographs plus step-by-step maintenance instructions for the standard South Bend workshop lathes that were produced in large numbers between 1939 and the late 1980's. As you will notice, this is not a fuzzy Xerox reprint of an older existing manual that you see on line frequently. This newly published book was produced over the last two years specifically with the South Bend Lathe enthusiast in mind and it addresses the most commonly asked questions and methods for how to renovate a used machine tool. Even though South Bend ceased production of these fine quality lathes years ago, there are still thousands of servicable lathes sitting out there in home shops, small businesses, schools and machinery dealers. This book takes the guess work out of what to do if you find one and decide to purchase it. The details include the sequence for disassembling, cleaning, reassembling and adjusting the critical components of the 9" Model A, B, and C horizontal drive lathes plus the 10k (or "light 10" model). Additional information is included for evaluating and purchasing a used SBL if you are not lucky enough to already own one and we have a section on refinishing industrial machinery. The typeface of the manual is two points larger

than normal for those of us who prefer to work at the bench without reading glasses. The instructions are very straight forward and no prior machinery renovation experience is required. The manual also includes a list of resources for vintage SBL owners as well as parts references, tool requirements, lubrication guides and material specifications. If you have a Southbend lathe, don't miss your chance to pick up a complete guide for a very reasonable price. PLEASE NOTE: This manual does not cover the 10L or "Heavy Ten" South Bend Lathe since they are two distinctly different designs. If you have a 10L or larger industrial lathe, please check out our other manuals.

How to Run a Lathe

Using castings from your charcoal foundry (see Book 1 in the series: The Charcoal Foundry by David Gingery) and simple hand methods (no machine tools needed!) you can build a sturdy and accurate bed for a metal lathe. Then additional castings, common hardware items and improvised equipment will add the headstock, tailstock, carriage and all the remaining parts to complete the lathe. Illustrated with photos and drawings to show you all you need to know about

patterns, molding, casting and finishing the parts. The lathe specs. include a 7" swing over the bed and 12" between centers. Adjustable tailstock with set-over for taper turning. Adjustable gibs in sliding members and adjustable sleeve bearings in the headstock. A truly practical machine capable of precision work. Once you have a foundry to cast the parts and a lathe to machine them you can tackle more exotic projects.
