Handbook of Chemical and Biological Warfare Agents

This title includes a number of Open Access chapters. The twenty-first century world faces several enormous challenges: how to mitigate climate change, meet a growing energy demand without relying on fossil fuels, and manage the escalating quantities of solid waste generated by cities around the world. This compendium volume offers a viable solution to all three: using solid waste as a renewable resource. Intended for a wide audience ranging from engineers and academics to decision-makers in both the public and private sectors, this volume has gathered together research into a range of technologies and methodologies. The editors, two well-published researchers at the top of their field, have selected articles that lay the foundation for this discussion. They have then included chapters for the following waste management scenarios: anaerobic digestion, composting, pyrolysis and chemical upgrading, incineration and carbonization, and gasification. Research has been included from around the world, representing potential international solutions to what are global challenges, as well as crucial implications for ongoing research in this important field of study.

This book constitutes the refereed post-conference proceedings of the Fourth International Conference on Future Access Enablers for Ubiquitous and Intelligent Infrastructures, FABULOUS 2019, held in Sofia, Bulgaria, in March 2019. This year's conference topic covers Globalization through Advanced Digital Technologies – as the digitalization in all spheres of life has an impressive influence on communication and daily life in general. The 39 revised full papers were carefully reviewed and

selected from 54 submissions. The main topics deal with: healthcare/wellness applications; IoT and sensor networks; IoT security in the digital transformation era; wireless communications and networks; virtual engineering and simulations.

Intermediate Comprehension Passages

This volume is a compilation of selected papers that were presented at the annual conference of the International Council of Educational Media (ICEM) in Tallinn, Estonia, on September 5 - 7, 2018. The book reports on recent interdisciplinary research and innovative practices regarding school-wide implementation of digital innovation and connects it with recent developments in the field of educational media. The key concept is "Digital Turn," which is understood as a socio-technical transition towards next-generation digital learning ecosystems in education. Although Digital Turn can also be implemented at the classroom or national levels, most of the contributions in this volume take a whole-school perspective on the policies and practices regarding digital innovation, educational media, e-assessment, digital competences of teachers and students as well as learning design and learning analytics.

Books in Print Supplement

Responding to recent developments and a growing VLSI circuit manufacturing market, Technology Computer Aided Design: Simulation for VLSI MOSFET examines advanced MOSFET processes and devices through TCAD numerical simulations. The

book provides a balanced summary of TCAD and MOSFET basic concepts, equations, physics, and new technologies related to TCAD and MOSFET. A firm grasp of these concepts allows for the design of better models, thus streamlining the design process, saving time and money. This book places emphasis on the importance of modeling and simulations of VLSI MOS transistors and TCAD software. Providing background concepts involved in the TCAD simulation of MOSFET devices, it presents concepts in a simplified manner, frequently using comparisons to everyday-life experiences. The book then explains concepts in depth, with required mathematics and program code. This book also details the classical semiconductor physics for understanding the principle of operations for VLSI MOS transistors, illustrates recent developments in the area of MOSFET and other electronic devices, and analyzes the evolution of the role of modeling and simulation of MOSFET. It also provides exposure to the two most commercially popular TCAD simulation tools Silvaco and Sentaurus.

- Emphasizes the need for TCAD simulation to be included within VLSI design flow for nano-scale integrated circuits
- Introduces the advantages of TCAD simulations for device and process technology characterization
- Presents the fundamental physics and mathematics incorporated in the TCAD tools
- Includes popular commercial TCAD simulation tools (Silvaco and Sentaurus)
- Provides characterization of performances of VLSI MOSFETs through TCAD tools
- Offers familiarization to compact modeling for VLSI circuit simulation

R&D cost and time for electronic product development is drastically reduced by taking advantage of TCAD tools, making it indispensable for modern VLSI device technologies. They provide a means to characterize the MOS transistors and improve the VLSI circuit simulation procedure. The comprehensive information and systematic approach to design, characterization, fabrication, and computation of VLSI MOS transistor through TCAD tools presented in this book provides a thorough foundation for the development of models that simplify the design verification process and make it cost effective.

with a Postscript coauthored by Michael W. Goheen In print for two decades and translated into eight languages, Albert Wolters's classic formulation of an integrated Christian worldview has been revised and expanded to reach new readers beyond the generation that has already benefited from this clear, concise proposal for transcending the false dichotomy between sacred and secular. Wolters begins by defining the nature and scope of a worldview, distinguishing it from philosophy and theology. He then outlines a Reformed analysis of the three basic categories in human history -- creation, fall, and redemption -- arguing that while the fall reaches into every corner of the world, Christians are called to participate in Christ's redemption of all creation. This Twentieth Anniversary edition features a new concluding chapter, coauthored with Michael Goheen, that helpfully places the discussion of worldview in a broader narrative and missional context.

Eileen Apperson has always felt a visceral reaction to landscapes. The one she lives in has been compromised and altered, making her relationship to this place all the more complicated. The San Joaquin Valley has gone through series of transitions to become the worlds greatest agricultural region. To reach such status, the land has gone through sweeping alterations over the past 150 years. This has been due to a series of events brought about by missionaries, trappers, cattlemen famers, and finally a growing urban population. Pattern of the Land explores each of these stages in the valley's history by describing the uniqueness of its terrain. What brings this recorder upon the land closer is that the most significant of these changes have come at the hands of her family, the first settlers in a frontier. Pattern of the Land weaves family stories with historic accounts, focusing primarily on the region where the Kings River descends the Sierra to the area that was Tulare Lake. These sketches guide her search fit home in an altered landscape. Family has been one constant in the place she has grown to appreciate and is now proud to call home.

The Filipino economy has experienced overall growth over the last 20 years, but the growth of the manufacturing sector has been sluggish, and the country has lost innovation capacity. Regaining momentum will depend on many factors, but skills have a key role to play in supporting the growing service sector, improving the competitiveness of the manufacturing sector, and enhancing the long-term ability of the country to innovate and adapt and assimilate new technologies. 'Skills for the Labor Market in the Philippines' analyzes the functional skills with which workers need to be equipped to be employable and support firms competitiveness and productivity, and evaluates the role of the education and training system in providing these skills. Based on an innovative survey of employers, this book is the most comprehensive attempt thus far to review the skills that matter for the labor market. The book reveals that a dramatic increase in educational attainment occurred in just under two decades in the Philippines. However, in light of the growing demand for skills, the authors also make it clear that there are indications of emerging skills gaps, suggesting that skills are becoming a constraining factor for economic growth. The authors flesh out several policy implications, which should provide a valuable contribution to improving the country's education and training system. The book is primarily intended for the policy makers and researchers who shape the delivery of education and training in the Philippines and other middle-income countries.
