### **Vampire Haiku**

Scott Sigler's *Infected* shocked readers with a visceral, up-close account of physical metamorphosis and one man's desperate fight for sanity and survival, as "Scary" Perry Dawsey suffered the impact of an alien pathogen's early attempts at mass extinction. In the sequel *Contagious*, Sigler pulled back the camera and let the reader experience the frantic national response to this growing cataclysm. And now in *Pandemic*, the entire human race balances on the razor's edge of annihilation, beset by an enemy that turns our own bodies against us, that changes normal people into psychopaths or transforms them into nightmares. To some, Doctor Margaret Montoya is a hero—a brilliant scientist who saved the human race from an alien intelligence determined to exterminate all of humanity. To others, she's a monster—a mass murderer single-handedly responsible for the worst atrocity ever to take place on American soil. All Margaret knows is that she's broken. The blood of a million deaths is on her hands. Guilt and nightmares have turned her into a shut-in, too mired in self-hatred even to salvage her marriage, let alone be the warrior she once was. But she is about to be called into action again. Because before the murderous intelligence was destroyed, it launched one last payload — a soda can-sized container filled with deadly microorganisms that make humans feed upon their own kind. That harmless-looking container has

languished a thousand feet below the surface of Lake Michigan, undisturbed and impotent . . . until now. Part Cthulhu epic, part zombie apocalypse and part blockbuster alien-invasion tale, *Pandemic* completes the *Infected* trilogy and sets a new high-water mark in the world of horror fiction.

### **Meat Biotechnology**

From the acclaimed author of *Infected* comes an epic and exhilarating story of humanity's secret battle against a horrific enemy. Across America, a mysterious pathogen transforms ordinary people into raging killers, psychopaths driven by a terrifying, alien agenda. The human race fights back, yet after every battle the disease responds, adapts, using sophisticated strategies and brilliant ruses to fool its pursuers. The only possible explanation: the epidemic is driven not by evolution but by some malevolent intelligence. Standing against this unimaginable threat is a small group, assembled under the strictest secrecy. Their best weapon is hulking former football star Perry Dawsey, left psychologically shattered by his own struggles with this terrible enemy, who possesses an unexplainable ability to locate the disease's hosts. Violent and unpredictable, Perry is both the nation's best hope and a terrifying liability. Hardened CIA veteran Dew Phillips must somehow forge a connection with him if they're going to stand a chance against this maddeningly adaptable opponent. Alongside them is Margaret Montoya, a brilliant epidemiologist who fights for a cure even as she reels under the weight of endless horrors. These three and

their team have kept humanity in the game, but that's not good enough anymore, not when the disease turns contagious, triggering a fast countdown to Armageddon. Meanwhile, other enemies join the battle, and a new threat — one that comes from a most unexpected source — may ultimately prove the most dangerous of all. Catapulting the reader into a world where humanity's life span is measured in hours and the president's finger hovers over the nuclear button, rising star Scott Sigler takes us on a breathtaking, hyper-adrenalized ride filled with terror and jaw-dropping action. Contagious is a truly grand work of suspense, science, and horror from a new master. From the Hardcover edition.

### **Contagious**

"During the [Khmer Rouge] regime, precious objects were closely guarded out of fear. Some were wrapped in plastic and buried underground, others were carefully hidden within household utility objects like pots or kettles, in the hope that they would not be found until reaching safety. Alive is an ongoing project by Cambodian artist Kim Hak that brings these objects into close view, exploring the stories of conflict and personal tragedy they carry with them. For the project Hak, who is based in Phnom Penh, met 12 families who came to New Zealand as refugees in the 1970s and 1980s. He documented the objects that travelled with them as they moved through border camps, refugee centres and ultimately as they settled to start new lives in Auckland. In this exhibition, the photographs appear alongside some of the actual objects. Alive demonstrates the power and importance objects can play in our lives, as vessels for memory and markers of change. The exhibition serves to celebrate Cambodian communities living in Aotearoa, creating a moment for greater understanding of their experience of extraordinary conflict and sacrifice."--ObjectSpace website.

Set in a lethal pro football league 700 years in the future, THE ROOKIE is a story that combines the intense gridiron action of "Any Given Sunday" with the space opera style of "Star Wars" and the criminal underworld of "The Godfather." Organized crime runs every franchise, games are fixed and rival players are assassinated. Follow the story of Quentin Barnes, a 19-year-old quarterback prodigy that has been raised all his life to hate, and kill, those aliens. Quentin must deal with his racism and learn to lead, or he'll wind up just another stat in the column marked "killed on the field." In the Galactic Football League, wars are no longer fought in space, but on the gridiron. If you like aliens and football then I suspect you're unlikely to find a better combination than than THE ROOKIE.

### **Alight**

“The ancestors are out there...you have to believe me.” From acclaimed author Scott Sigler—New York Times bestselling creator of *Infected* and *Contagious*—comes a tale of genetic experimentation’s worst nightmare come true. Every five minutes, a transplant candidate dies while waiting for a heart, a liver, a kidney. Imagine a technology that could provide those life-saving transplant organs for a nominal fee and imagine what a company would do to get a monopoly on that technology. On a remote island in the Canadian Arctic, PJ Colding leads a group of geneticists who have discovered this holy grail of medicine. By

reverse-engineering the genomes of thousands of mammals, Colding's team has dialed back the evolutionary clock to re-create humankind's common ancestor. The method? Illegal. The result? A computer-engineered living creature, an animal whose organs can be implanted in any person, and with no chance of transplant rejection. There's just one problem: these ancestors are not the docile herd animals that Colding's team envisioned. Instead, Colding's work has given birth to something big, something evil. With these killer creatures on the prowl, Colding and the woman he loves must fight to survive — even as government agents close in to shut the project down, and the deep-pocketed company backing this research proves to have its own cold-blooded agenda. As the creators become the prey in the ultimate battle for survival, Scott Sigler takes readers on the ultimate thrill-ride—and offers a chilling cautionary account of what can happen when hubris, greed, and madness drive scientific experimentation past the brink of reason. From the Hardcover edition.

Jonath Krakens to a lower-tier championship, a championship that earns them promotion into the meat grinder known as "Tier One." ### **Nocturnal**

• • • John Harper • • • Nature conservation has changed from an idealistic philosophy to a serious

technology. Ecology, the science that underpins the technology of conservation, is still too immature to provide all the wisdom that it must. It is arguable that the desire to conserve nature will in itself force the discipline of ecology to identify fundamental problems in its scientific goals and methods. In return, ecologists may be able to offer some insights that make conservation more practicable (Harper 1987). The idea that nature (species or communities) is worth preserving rests on several fundamental arguments, particularly the argument of nostalgia and the argument of human benefit and need. Nostalgia, of course, is a powerful emotion. With some notable exceptions, there is usually a feeling of dismay at a change in the status quo, whether it be the loss of a place in the country for walking or rambling, the loss of a painting or architectural monument, or that one will never again have the chance to see a particular species of bird or plant.

You hold in your hands a recently discovered poetry journal—the poetry journal of a vampire. William Butten was en route to a new land on the Mayflower when he was turned into a vampire by a fellow passenger, a beautiful woman named Katherine. These pages contain his heartbreaking story—the story of a vampire who has lived through (and perhaps caused) some of America's defining events. As he travels the country and as centuries pass, he searches for his lost love and records his adventures and misadventures using the form of poetry known as haiku. As Butten documents bloody wars, a certain tea party in Boston, living the high life during the Great Depression, two Woodstock festivals, the corruption of Emily Dickinson, and hanging out with Davy Crockett, he keeps to the classic 5-7-5 syllable structure of haiku. The resulting poems are hilarious,

repulsive, oddly romantic, and bizarre. Read along, and you just may find a new appreciation for—and insight into—various events in American history. And blood.

Meat and meat products constitute one of the most important foods in western societies. However, the area of meat biotechnology is not as comprehensively covered as other areas of food biotechnology. Missing from this area are the recent developments for better sensory and nutritional quality as well as improved safety. The main goal of this book is to provide the reader with the recent developments in biotechnology and their applications in the meat processing chain. To achieve this goal, the book is divided into four parts. The first part deals with the use of modern biotechnology applied to farm animals. The second part focuses on the recent biotechnological developments in starter cultures for better meat fermentation. The third part discusses current approaches to improve the quality and nutritional properties of meats. The final part presents the latest advances in protection against foodborne pathogens, and other recent trends in the field. ### **The Alchemist of Souls**

The brand-new official Minecraft novel is a journey into the unknown! Max and Alison are proof that differences don't stand in the way of friendship. Max is always on the lookout for a new adventure—even if it means getting into trouble—while Alison prefers to follow the rules. But both of them are fascinated by the beat-up old journal Max finds and the strange gate its secretive author, the Enchanter, describes: a portal to an otherworldly realm of danger called the Nether. After they use the journal's instructions to craft the portal, Max and Alison squabble over whether to remain safe in the Overworld or to journey into the Nether to find the Enchanter . . . until a fateful accident makes the decision for them. Trapped in a scary new world, Max and Alison find an ally in Freya, a fierce warrior who has been living in the Nether with her beloved wolf, Bunny Biter. With Freya's help, and with the clues that lie in the pages of the mysterious journal, Max and Alison embark on a quest to find the Enchanter, even as the Nether pushes their skills—and their friendship—to the limit.
