Memoirs of a Hack Mechanic

By the late 1960s the Beetle had enjoyed over twenty years of continuous production, dominated its home market and conquered export markets all around the world. Volkswagen's policy of constant improvement and refinement to a single model appeared to be

vindicated. However, 1968 saw the death of Heinz Nordoff, who was the driving force behind the Beetle's evolution and continued success. In many ways, this was a watershed year; the 1968 model introduced many significant changes to the car, and it became inevitable that a replacement for the venerable Beetle would have to be developed. This book charts the closing years of the Beetle's production life in Germany; from the revamped 1968 model to the 1302, 1303, the Cabriolet, and the various Specials produced later. Topics covered include: - Brief history , 1935-1967 - Full history, 1968-1980 - Comprehensive production survey - Specification and detail changes by model year [August 1967 to January 1980] - Engine options - Factory fitted optional equipment - Paint and trim colors - Special and export editions - The Karmann Cabriolet

This is a faithful reproduction of the Floyd Clymer publication of the same title originally published in 1959. Written in a style that removes the mystique from performance tuning, much of the technical jargon is replaced with easy to read language and, to the credit of the author, he gets the message across without the need for the reader to possess a degree in mechanical engineering. A straightforward common sense approach to the subject of improving a VWs performance and while many of the manufacturers of the performance items referenced within may no longer be in business and prices have changed considerably since 1959, many new suppliers have come forward with alternate performance products. In addition, many of the vintage parts routinely turn up at swap meets and can also be obtained through a variety of vintage performance parts suppliers. Therefore, while some of resources may have changed since 1959 the information is still applicable and should assist in providing the reader with appropriate data to aid in the selection of the newer performance products currently available. This how-to manual also includes complete technical data, tune-up information, fault finding charts and a detailed list of construction changes that took place between the years 1957 and 1959. Out-of-print and unavailable for

many years, this book is becoming increasingly more difficult to find on the secondary market and we are pleased to be able to offer this reproduction as a service to all VW enthusiasts worldwide.

The VW Super Beetle was a different beast from the very simple original Beetle. McPherson struts at the front and semi-trailing arms at the rear were more sophisticated than the older car and a bigger engine gave it more performance. Long ignored by most restorers, it is becoming more desirable as the stocks of older cars are restored or rust away. This book tells you how to restore a Super Beetle to clean, roadworthy condition with minor modifications to improve performance and handling. It describes a detailed build-up from paint and body to interior and mechanical parts. It is an invaluable guide for any Super Beetle owner or restorer.
