The general purpose with which this book has been written is sufficiently indicated by its title. I have selected a number of the 'classical' experiments of Experimental Psychology, and have tried to present them in such a way that their performance shall have a real disciplinary value for the undergraduate student. Within this general purpose, my aim has been two-fold. I have sought to show, in the first place, that psychology is above the laboratory: that we employ our instruments of precision not for their own sake, but solely because they help us to a refined and more accurate introspection. And secondly, just as in my Outline of Psychology and Primer of Psychology I gave the results of experimentation a prominent place in the psychological system, so here I have treated the selected experiments not as

separate exercises, but as points of departure for systematic discussion. (PsycINFO Database Record (c) 2005 APA, all rights reserved).

The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research scientists to maintain consistency in evaluating the efficacy of diagnosis and treatment. The CD-ROM packaged with each Manual contains printable copies of each of the book's 45 Staging Forms.

A Laboratory Manual of Analytical Methods of Protein Chemistry, Volume 4 provides information pertinent to the fundamental aspects of protein chemistry. This book discusses the simple and accurate methods of estimating specific proteins. Organized into six chapters, this volume begins with an overview of the composition of acids and experimental conditions for the acid hydrolysis of proteins. This text then examines the advantages of high-voltage electrophoresis for amino acid analysis, which are paralleled by equal advantages in the peptide separation field. Other chapters consider the simple technique of estimating specific proteins, which is one

of several based on the phenomenon of antigen-antibody precipitation in gels. This book discusses as well the summations of analyses in weight percentages of the various residues and of the nitrogen of each constituent. The final chapter deals with the electrical properties of molecules. This book is a valuable resource for physicists and research workers.
